NOTES

Chapter 1

Introduction

About this Manual

This Product Reference Guide (PRG) is provided for users seeking advanced technical information, including connection, programming, maintenance and specifications. The Quick Reference Guide (QRG) and other publications associated with this product are downloadable free of charge from the website listed on the back cover of this manual.

Overview

Chapter 1, (this chapter) presents information about manual conventions, and an overview of the reader, its features and operation.

[Chapter 2, Setup](#) presents information about unpacking, cable connection information and setting up the reader.

[Chapter 3, Configuration Using Barcodes](#) provides instructions and barcode labels for customizing your reader. There are different sections for interface types, general features, data formatting, symbology-specific and model-specific features.

[Chapter 4, Laser Features](#) describes options and programming specific to laser models.

[Chapter 5, References](#) provides background information and detailed instructions for more complex programming items.

[Appendix A, Technical Specifications](#) lists physical and performance characteristics, as well as environmental and regulatory specifications. It also provides standard cable pin-outs and LED/Beeper functions.

[Appendix B, Standard Defaults](#) references common factory default settings for reader features and options.

[Appendix C, Sample Barcodes](#) offers sample barcodes of several common symbologies.

[Appendix D, Keypad](#) includes numeric barcodes to be scanned for certain parameter settings.

[Appendix E, Scancode Tables](#) lists control character emulation information for Wedge and USB Keyboard interfaces.

Manual Conventions

The following conventions are used in this document:

The symbols listed below are used in this manual to notify the reader of key issues or procedures that must be observed when using the reader:

Notes contain information necessary for properly diagnosing, repairing and operating the reader.

The CAUTION symbol advises you of actions that could damage equipment or property.

CAUTION

References

Current versions of this Product Reference Guide (PRG), Quick Reference Guide (QRG), and any other manuals, instruction sheets and utilities for this product can be downloaded from the website listed below. Alternatively, printed copies or product support CDs for most products can be purchased through your Wasp reseller.

Technical Support

Wasp Website Support

The Wasp website (www.waspbarcode.com) is the complete source for technical support and information for Wasp products. The site offers product support, warranty information, product manuals, product tech notes, software updates, demos, and instructions for returning products for repair.

Telephone Technical Support

If you do not have internet or email access, you may contact Wasp Barcode Technologies technical support at 214-547-4100, or check the back cover of this manual for more contact information.

About the Reader

Typically, units are factory-programmed for the most common terminal and communications settings. If you need to modify any programmable settings, custom configuration can be accomplished by scanning the programming barcodes within this guide.

The WLS9600 model has a Laser scan engine. Advancements in the LED technology used in the imager-based readers significantly improve the illumination of the target field of view, resulting in higher scan efficiency. Whether used in Single Trigger or Continuous Mode, the ergonomic design of the reader will help to promote comfortable handling during extended periods of use.

See ["Interface Selection" on page 8](#) for a listing and descriptions of available interface sets by model type.

Programming the Reader

Configuration Methods

Programming Barcodes

The reader is factory-configured with a standard set of default features. After scanning the interface barcode, you can select other options and customize your reader through use of the instructions and programming barcode labels available in the corresponding features section for your interface. Customizable settings for many features are found in ["Configuration Using Barcodes"](#) starting on page 15.

Some programming labels, like ["Restore Custom Defaults" on page 13](#), require only the scan of the single label to enact the change. Most, however, require the reader to be placed in Programming Mode prior to scanning them. Scan an ENTER/EXIT barcode once to enter Programming Mode. Once the reader is in Programming Mode, scan a number of parameter settings before scanning the ENTER/EXIT barcode a second time, which will then accept your changes, exit Programming Mode and return the reader to normal operation.

There are some exceptions to the typical programming sequence described above. Please read the description and setting instructions carefully when configuring each programmable feature.

NOTES

Chapter 2

Setup

Unpacking

Check carefully to ensure the reader and any accessories ordered are present and undamaged. If any damage occurred during shipment, contact Wasp Technical Support. Information is shown on [page 2](#).

KEEP THE PACKAGING. Should the unit ever require service, it should be returned in its original shipping container.

Setting Up the Reader

Follow the steps provided in this section to connect and get your reader up and communicating with its host.

1. Begin by [Installing the Interface Cable](#).
2. Go to [Interface Selection](#) and set the desired interface.
3. [Configure Interface Settings](#) (only if not using factory settings for that interface)
4. Go to [Configuring Other Features](#) (if modifications are needed from factory settings)

Installing the Interface Cable

For Corded versions, connect the reader cable by inserting the cable into the handle as shown in [Figure 1](#). To remove it, insert a paper clip into the release aperture, then unplug the cable.

Figure 1. Connect/disconnect the cable

RS-232 Serial Connection

Turn off power to the terminal/PC and connect the reader to the terminal/PC serial port via the RS-232 cable as shown in [Figure 2](#). If the terminal will not support POT (Power Off the Terminal) to supply reader power, use the approved power supply (AC Adapter). Plug the AC Adapter barrel connector into the socket on the RS-232 cable connector and the AC Adapter plug into a standard power outlet.

Figure 2. RS-232 Connection

Keyboard Wedge Connection

The Keyboard Wedge cable has a 'Y' connection from the reader. Connect the female to the male end from the keyboard and the remaining end at the keyboard port at the terminal/PC. Reference [Figure 3](#).

Figure 3. Keyboard Wedge Interface connection

USB Connection

Connect the reader to a USB port on the terminal/PC using the correct USB cable for the interface type you ordered. Reference [Figure 4](#).

Figure 4. USB connection

Other connection types are described below and illustrated in [Figure 5](#).

Figure 5. Other Interface Connections

Specific cables are required for connection to different hosts. The connectors illustrated above are examples only. Actual connectors may vary from those illustrated, but the steps to connect the reader remain the same.

Interface Selection

Upon completing the physical connection between the reader and its host, proceed to Table 1 [starting on page 9](#) to select the interface type the reader is connected to (for example: RS-232, Keyboard Wedge, USB, etc.). Scan the appropriate barcode in that section to configure your system's correct interface type.

The reader will support one of the following sets of host interfaces:

- RS-232
- RS-232 OPOS
- USB
- Keyboard Wedge
- Wand Emulation

Setting the Interface

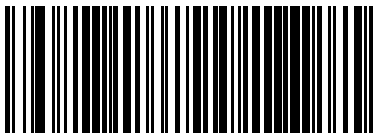

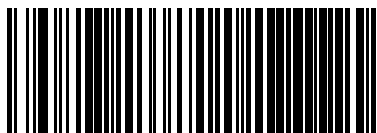

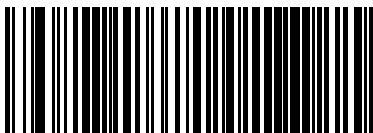

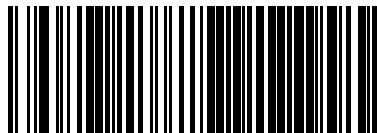

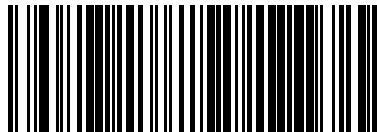

Scan the programming barcode from this section which selects the appropriate interface type matching the system the reader will be connected to. Next, proceed to the corresponding section in this manual (also listed in [Table 1 starting on page 9](#)) to configure any desired settings and features associated with that interface.

Unlike some programming features and options, interface selections require that you scan only one programming barcode label. DO NOT scan an ENTER/EXIT barcode prior to scanning an interface selection barcode.

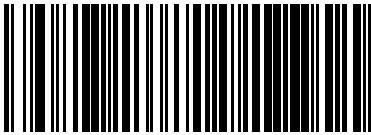

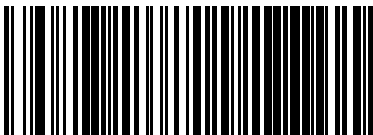

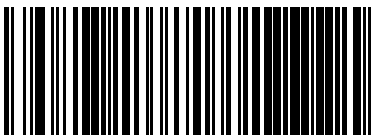

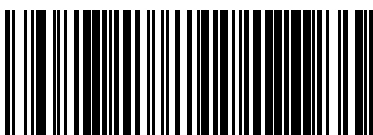

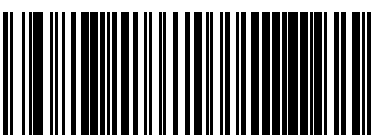

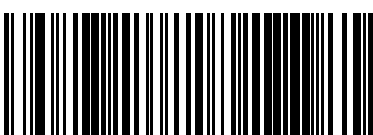

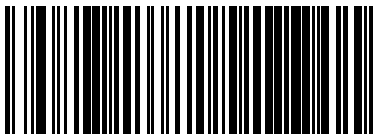

Some interfaces require the scanner to start in the disabled state when powered up. If additional scanner configuration is desired while in this state, pull the trigger and hold it for five seconds. The scanner will change to a state that allows programming with barcodes.

Table 1. Available Interfaces

RS-232		FEATURES
RS-232 standard interface	 Select RS232-STD	Set RS-232 Interface Features starting on page 19
 Select RS232-WN	RS-232 Wincor-Nixdorf	
RS-232 for use with OPOS/UPOS/JavaPOS	 Select RS-232 OPOS	
 Select USB-COM-STD ^a	USB Com to simulate RS-232 standard interface	
USB-OEM		FEATURES
 Select USB-OEM	USB-OEM (can be used for OPOS/UPOS/JavaPOS)	Set USB-OEM Interface Features starting on page 45

a. Download the correct USB Com driver from www.waspbarcode.com

KEYBOARD (continued)		FEATURES
Keyboard Wedge for IBM Terminals 31xx, 32xx, 34xx, 37xx make only keyboard	 Select KBD-IBM-M	Set KEYBOARD WEDGE Interface Features starting on page 33
 Select KBD-IBM-MB	Keyboard Wedge for IBM Terminals 31xx, 32xx, 34xx, 37xx make break keyboard	
Keyboard Wedge for DIGITAL Terminals VT2xx, VT3xx, VT4xx	 Select KBD-DIG-VT	
 Select USB Keyboard	USB Keyboard with standard key encoding	
USB Keyboard with alternate key encoding	 Select USB Alternate Keyboard	
 Select USB-KBD-APPLE	USB Keyboard for Apple computers	
WAND EMULATION		FEATURES
Wand Emulation	 Select WAND	Set WAND Interface Features starting on page 47

Customizing Configuration Settings

Configure Interface Settings

If after scanning the interface barcode from the previous table, your installation requires you to select options to further customize your reader, turn to the appropriate section for your interface type in "Configuration Using Barcodes" starting on page 15.

- "RS-232 ONLY Interface" on page 19
- "RS-232/USB-Com Interfaces" on page 24
- "Keyboard Interface" on page 33
- "USB-OEM Interface" on page 45
- "Wand Emulation Interface" on page 47

Global Interface Features

See "Global Interface Features" on page 17 for settings configurable by all interface types.

Configuring Other Features

If your installation requires different programming than the standard factory default settings, the following sections of this manual allow configuration of non-interface-specific settings you might require:

Reading Parameters: Reading Parameters include programming for scanning, beeper and LED indicators and other universal settings.

Code Selection: Includes options concerning the barcode label types (symbolologies). These settings allow you to enable/disable symbolologies, set label lengths, require check digit, etc.

Laser Features: Describes options and programming specific to laser models.

Software Version Transmission

The software version of the device can be transmitted over the RS-232 and Keyboard interfaces by scanning the following label.

Transmit Software Version

Resetting the Product Configuration to Defaults

Restore Custom Defaults

If you aren't sure what programming options are in your imager, or you've changed some options and want to restore the Custom Default Configuration that may have been saved in the scanner, scan the Restore Custom Default Configuration barcode below. This will restore the custom configuration for the currently active interface.

Custom defaults are based on the interface type. Configure the imager for the correct interface before scanning this label.

Restore Custom Default Configuration

Restore Factory Configuration

If you want to restore the Factory Configuration for your imager, scan either the Restore USA Factory Configuration barcode or the Restore EU Factory Configuration barcode below. Both labels restore the scanner configuration to the factory settings, including the interface type. The USA label restores Label IDs to those historically used in the USA. The EU label restores Label IDs to those historically used in Europe. The Label ID sets for USA and EU are shown in the “Label ID” section on [page 55](#) of this manual.

Restore USA Factory Configuration

Restore EU Factory Configuration

The programming items listed in the following sections show the factory default settings for each of the menu commands.

NOTES

Chapter 3

Configuration Using Barcodes

This and following sections provide programming barcodes to configure your reader by changing the default settings. For details about additional methods of programming, see [Configuration Methods on page 3](#).

You must first enable your reader to read barcodes in order to use this section. If you have not done this, go to [Setup, starting on page 5](#) and complete the appropriate procedure.

Configuration Parameters

Once the reader is set up, you can change the default parameters to meet your application needs. Refer to ["Standard Defaults" starting on page 265](#) for initial configuration in order to set the default values and select the interface for your application.

The following configuration parameters are divided into logical groups, making it easy to find the desired function based on its reference group.

Interface Configuration:

- ["RS-232 ONLY Interface" on page 19](#)
- ["RS-232/USB-Com Interfaces" on page 24](#)
- ["Keyboard Interface" on page 33](#)
- ["USB-OEM Interface" on page 45](#)
- ["Wand Emulation Interface" on page 47](#)

Parameters common to all interface applications:

- ["Data Format" on page 51](#) gives options to control the messages sent to the Host system.
- ["Reading Parameters" on page 65](#) control various operating modes and indicators status functioning.

Symbology-specific parameters:

- ["Code Selection" on page 77](#) provides configuration of a personalized mix of codes, code families and their options.

Model-specific parameters:

- ["Laser Features" on page 227](#) provides options specific to laser models.

Reading Configuration Barcodes

You must first enable your reader to read barcodes in order to use this section. If you have not done this, go to [Setup](#), starting on page 5 and complete the appropriate procedure.

To program features:

1. Scan the ENTER/EXIT PROGRAMMING barcode, available at the top of each programming page, when applicable.
2. Scan the barcode to set the desired programming feature. You may need to cover unused barcodes on the page, and possibly the facing page, to ensure that the reader reads only the barcode you intend to scan.
3. If additional input parameters are needed, go to [Appendix D, Keypad](#), and scan the appropriate characters from the keypad.

Additional information about many features can be found in the “References” chapter.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

4. Complete the programming sequence by scanning the ENTER/EXIT PROGRAMMING barcode to exit Programming Mode.

For detailed descriptions, programming information and examples for setting selected configuration items, see [References](#), starting on page 231.

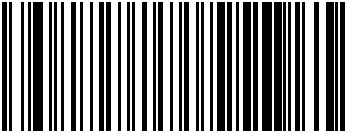

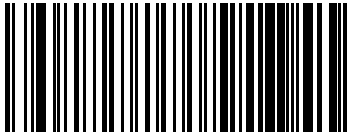

GLOBAL INTERFACE FEATURES

The following interface features are configurable by all interface types.

Host Commands — Obey/Ignore

This option specifies whether the reader will obey or ignore host commands. When set to ignore, the reader will ignore all host commands except for those necessary for:

- service mode
- flash programming mode
- keeping the interface active
- transmission of labels.

	 Host Commands = Obey
 Host Commands = Ignore	

USB Suspend Mode

This setting enables/disables the ability of USB interfaces to enter suspend mode.

	 USB Suspend Mode = Disable
 USB Suspend Mode = Enable	

NOTES

RS-232 ONLY INTERFACE

BAUD RATE on page 20
DATA BITS on page 21
STOP BITS on page 21
PARITY on page 22
HANDSHAKING CONTROL on page 23

Use the programming barcodes in this section if modifications to the standard RS-232 interface settings are necessary to meet your system's requirements. Additional settings which apply to both the RS-232 and USB interfaces are available in the next section, "[RS-232/USB-Com Interfaces](#)" starting on page 24.

Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

ENTER/EXIT PROGRAMMING MODE

Baud Rate

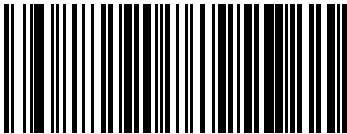

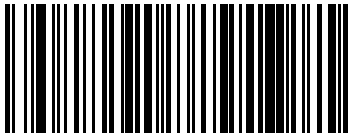

See [page 231](#) for information on this feature.

	 Baud Rate = 1200
 Baud Rate = 2400	
	 Baud Rate = 4800
 Baud Rate = 9600	
	 Baud Rate = 19,200
 Baud Rate = 38,400	
	 Baud Rate = 57,600
 Baud Rate = 115,200	

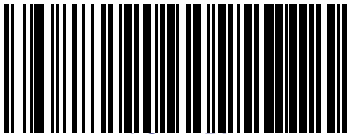

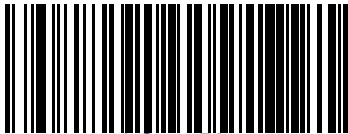

Data Bits

This parameter allows the reader to interface with devices requiring a 7-bit or 8-bit ASCII protocol for sending and receiving data.

	 7 Data Bits
 8 Data Bits	

Stop Bits

Set the number of stop bits to match host device requirements. See [page 231](#) for more information on this feature.

	 1 Stop Bit
 2 Stop Bits	

ENTER/EXIT PROGRAMMING MODE

Parity

This feature specifies parity required for sending and receiving data. Select the parity type according to host device requirements. See [page 231](#) for more information.

	 Parity = None
 Parity = Even	
	 Parity = Odd

Handshaking Control

See [page 231](#) for more information about this feature.

	 Handshaking Control = RTS
 Handshaking Control = RTS/CTS	
	 Handshaking Control = RTS/XON/XOFF
 Handshaking Control = RTS On/CTS	
	 Handshaking Control = RTS/CTS Scan Control

RS-232/USB-COM INTERFACES

INTERCHARACTER DELAY on page 25
BEEP ON ASCII BEL on page 25
BEEP ON NOT ON FILE on page 26
ACK NAK OPTIONS on page 27
ACK CHARACTER on page 28
NAK CHARACTER on page 28
ACK NAK TIMEOUT VALUE on page 29
ACK NAK RETRY COUNT on page 29
ACK NAK ERROR HANDLING on page 30
INDICATE TRANSMISSION FAILURE on page 30
DISABLE CHARACTER on page 31
ENABLE CHARACTER on page 31

The programming barcodes in this chapter allow modifications to the standard RS-232 and USB-Com interfaces. Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

Intercharacter Delay

This parameter specifies the intercharacter delay between the end of one character and the beginning of the next. The delay can be set within a range of zero (0) to 990 milliseconds in 10ms increments. A setting of zero specifies no delay.

See [page 232](#) for more information.

	 Intercharacter Delay = No Delay
 Select Intercharacter Delay Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

00 = No Intercharacter Delay

Beep On ASCII BEL

When this parameter is enabled, the reader issues a beep when a <BEL> character is detected on the RS-232 serial line. <BEL> is issued to gain a user's attention to an illegal entry or other important event.

 Beep On ASCII BEL = Disable	
	 Beep On ASCII BEL = Enable

ENTER/EXIT PROGRAMMING MODE

Beep On Not on File

This option enables/disables the action of the reader to sound a three beep sequence upon receiving a Not-On-File (NOF) host command.

Beep On Not On File = Disable

Beep On Not On File = Enable

ACK NAK Options

This enables/disables the ability of the reader to support the RS-232 ACK/NAK protocol.
See [page 233](#) for more information.

	 ACK/NAK Protocol = Disable ACK/NAK
 ACK/NAK Protocol = Enable for label transmission	
	 ACK/NAK Protocol = Enable for host-command acknowledge
 ACK/NAK Protocol = Enable for label transmission and host- command acknowledge	

ENTER/EXIT PROGRAMMING MODE

ACK Character

This setting specifies an ASCII character or hex value to be used as the ACK character. ASCII characters or any hex value from 0 to 0xFF can be selected. See [page 233](#) for more information.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

Select ACK Character Setting

DEFAULT

0x06 'ACK' Character

NAK Character

This setting specifies an ASCII character or hex value to be used as the NAK character. ASCII characters or any hex value from 0 to 0xFF can be selected. See [page 234](#) for more information.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

Select NAK Character Setting

DEFAULT

0x15 'NAK' Character

ACK NAK Timeout Value

This option specifies the amount of time the reader waits for an ACK character from the host following label transmission. The selectable timeout range is 200 milliseconds to 15,000ms (15 seconds) in 200ms increments. A selection of 0 disables the timeout.

See [page 235](#) for more information on setting this feature.

Select ACK NAK Timeout Value Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

DEFAULT

01 ACK NAK Timeout value is 200ms

ACK NAK Retry Count

This feature specifies the number of times the reader retries a label transmission due to a retry condition. The selectable range is from 1 to 254 retries. A selection of 0 disables the count, and a selection of 255 specifies unlimited retries. See [page 236](#) for more information.

Select ACK NAK Retry Count Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

DEFAULT

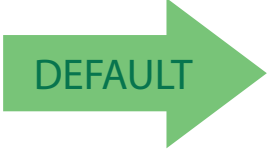

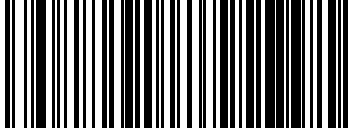

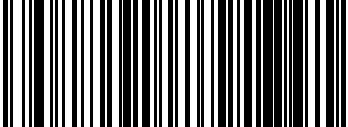

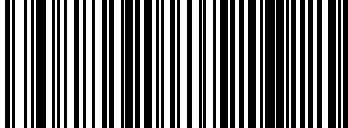

003 = 3 Retries

ENTER/EXIT PROGRAMMING MODE

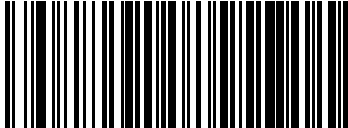

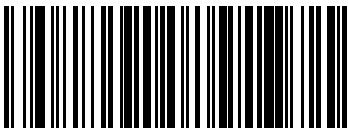

ACK NAK Error Handling

This feature specifies the method the reader uses to handle receive errors detected while waiting for an ACK character from the host.

	 ACK NAK Error Handling = Ignore Errors Detected
 ACK NAK Error Handling = Process Error as Valid ACK Character	
	 ACK NAK Error Handling = Process Error as Valid NAK Character

Indicate Transmission Failure

This option enables/disables the reader's ability to sound an error beep to indicate a transmission failure while in ACK/NAK mode.

	 Indicate Transmission Failure = Disable Indication
 Indicate Transmission Failure = Enable Indication	

Disable Character

Specifies the value of the RS-232 host command used to disable the reader.

ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

See [page 237](#) for more information on setting this feature.

Select Disable Character Setting

DEFAULT

0x44 = Disable Character is 'D'

Enable Character

Specifies the value of the RS-232 host command used to enable the reader.

ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

See [page 238](#) in “References” for more information on setting this feature.

Select Enable Character Setting

DEFAULT

0x45 = Enable Character is 'E'

ENTER/EXIT PROGRAMMING MODE

NOTES

KEYBOARD INTERFACE

COUNTRY MODE on page 34
CAPS LOCK STATE on page 37
NUMLOCK on page 38
SEND CONTROL CHARACTERS on page 39
WEDGE QUIET INTERVAL on page 40
INTERCHARACTER DELAY on page 41
INTERCODE DELAY on page 42
USB KEYBOARD SPEED on page 43
USB KEYBOARD NUMERIC KEYPAD on page 44

Use the programming barcodes in this chapter to select options for USB Keyboard and Wedge Interfaces. Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

Information about control character emulation which applies to keyboard interfaces is listed in [Appendix E, Scancode Tables](#).

ENTER/EXIT PROGRAMMING MODE

Country Mode

This feature specifies the country/language supported by the keyboard.

Only the following interfaces support ALL Country Modes.

- USB Keyboard (without alternate key encoding)
- AT, PS/2 25-286, 30-286, 50, 50Z, 60, 70, 80, 90 & 95 w/Std Key Encoding
- Keyboard Wedge for IBM AT PS2 with standard key encoding but without external keyboard
- AT, PS/2 25-286, 30-286, 50, 50Z, 60, 70, 80, 90 & 95 without Alternate Key
- Keyboard Wedge for IBM AT PS2 without alternate key encoding but without external keyboard
- Bluetooth HID Profile

All other interfaces support ONLY the following Country Modes: U.S., Belgium, Britain, France, Germany, Italy, Spain, Sweden.

	 Country Mode = U.S.
 Country Mode = Belgium	
	 Country Mode = Britain
 Country Mode = Croatia	Supports only the interfaces listed in the Country Mode feature description.
Supports only the interfaces listed in the Country Mode feature description.	 Country Mode = Czech Republic

**Country Mode (continued)**

 Country Mode = Denmark	Supports only the interfaces listed in the Country Mode feature description.
	 Country Mode = France
 Country Mode = French Canadian	
	 Country Mode = Germany
 Country Mode = Hungary	Supports only the interfaces listed in the Country Mode feature description.
	 Country Mode = Italy
 Country Mode = Japanese 106-key	Supports only the interfaces listed in the Country Mode feature description.

ENTER/EXIT PROGRAMMING MODE

Country Mode (continued)

 Country Mode = Lithuanian	
Supports only the interfaces listed in the Country Mode feature description.	 Country Mode = Norway
 Country Mode = Poland	Supports only the interfaces listed in the Country Mode feature description.
Supports only the interfaces listed in the Country Mode feature description.	 Country Mode = Portugal
 Country Mode = Romania	Supports only the interfaces listed in the Country Mode feature description.
Supports only the interfaces listed in the Country Mode feature description.	 Country Mode = Slovakia
 Country Mode = Spain	

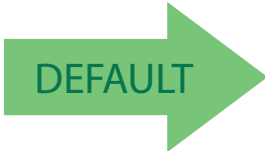

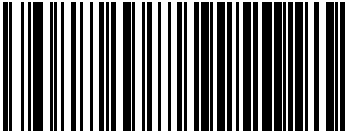

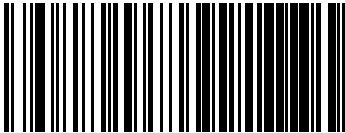

Country Mode (continued)

	<div> Country Mode = Sweden</div>
<div> Country Mode = Switzerland</div>	Supports only the interfaces listed in the Country Mode feature description.

Caps Lock State

This option specifies the format in which the reader sends character data. This applies to keyboard wedge interfaces and Bluetooth HID Profile. This does not apply when an alternate key encoding keyboard is selected.

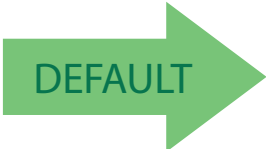

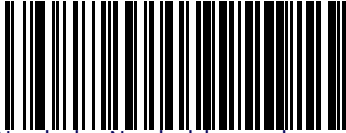

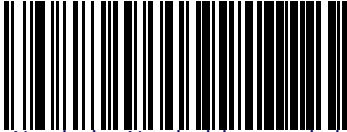

<div></div>	<div> Caps Lock State = Caps Lock OFF</div>
<div> Caps Lock State = Caps Lock ON</div>	
	<div> Caps Lock State = AUTO Caps Lock Enable</div>

ENTER/EXIT PROGRAMMING MODE

Numlock

This option specifies the setting of the Numbers Lock (Numlock) key while in keyboard wedge interface. This only applies to alternate key encoding interfaces. It does not apply to USB keyboard.

	 Numlock = Numlock key unchanged
 Numlock = Numlock key toggled	

Send Control Characters

This feature Specifies how the reader transmits ASCII control characters to the host. Reference [Appendix E, Scancode Tables](#) for more information about control characters.

Options are as follows:

Control Character 00 . Characters from 00 to 0x1F are sent as control character Ctrl+Keys, special keys are located from 0x80 to 0xA1.

Control Character 01 . Characters from 00 to 0x1F are sent as control character Ctrl+Capital Key, special keys are located from 0x80 to 0xA1.

Control Character 02 . Special keys are located from 00 to 0x1F and characters from 0x80 to 0xFE are intended as an extended ASCII table (Microsoft Windows Codepage 1252 — see "[Microsoft Windows Codepage 1252](#)" on page 291).

	 Wedge Send Control Characters = 00
 Wedge Send Control Characters = 01	
	 Wedge Send Control Characters = 02

ENTER/EXIT PROGRAMMING MODE

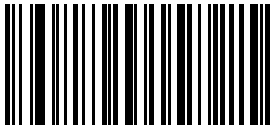

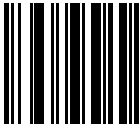

Wedge Quiet Interval

This option specifies the amount of time to look for keyboard activity before the reader breaks the keyboard connection in order to transmit data to host. The selectable range for this feature is from 0 to 990ms in 10ms increments.

This feature applies ONLY to the Keyboard Wedge interface.

See [page 239](#) in “References” for detailed information and examples for setting this feature.

 Select Wedge Quiet Interval Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

10 = Quiet Interval of 100 ms

Intercharacter Delay

This parameter specifies the intercharacter delay between the end of one character and the beginning of the next. The delay can be set within a range of zero (0) to 990 milliseconds in 10ms increments. A setting of zero specifies no delay.

This feature applies **ONLY** to the Keyboard Wedge interface and Bluetooth HID Profile.

See [page 240](#) in “References” for detailed information and examples for setting this feature.

	 Intercharacter Delay = No Delay
 Select Intercharacter Delay Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

00 = No Intercharacter Delay

ENTER/EXIT PROGRAMMING MODE

Intercode Delay

Specifies the delay between labels transmitted to the host for this interface. The selectable range for this feature is from 0 to 99 seconds.

See [page 241](#) in “References” for detailed information and examples for setting this feature.

Set Intercode Delay

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

00 = No Wedge Intercode Delay

USB Keyboard Speed

This option specifies the USB poll rate for a USB keyboard.

This feature applies **ONLY** to the USB Keyboard interface.

	 USB Keyboard Speed = 1ms
 USB Keyboard Speed = 2ms	
	 USB Keyboard Speed = 3ms
 USB Keyboard Speed = 4ms	
	 USB Keyboard Speed = 5ms
 USB Keyboard Speed = 6ms	

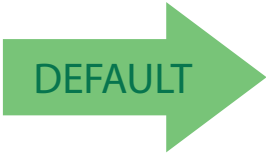

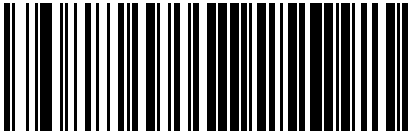

ENTER/EXIT PROGRAMMING MODE

USB Keyboard Speed (continued)

	 USB Keyboard Speed = 7ms
 USB Keyboard Speed = 8ms	
	 USB Keyboard Speed = 9ms
 USB Keyboard Speed = 10ms	

USB Keyboard Numeric Keypad

This option Controls whether numeric characters will be sent using standard keys or the numeric keypad.

	 Standard Keys
 Numeric Keypad	

USB-OEM INTERFACE

USB-OEM DEVICE USAGE on page 46
INTERFACE OPTIONS on page 46

Feature settings for USB interfaces differ depending upon which host type the reader will be connected with. Use the feature settings in this chapter to specifically configure for the USB-OEM interface. Other USB interfaces are included in the appropriate chapter for their host type.

Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

ENTER/EXIT PROGRAMMING MODE

USB-OEM Device Usage

The USB-OEM protocol allows for the reader to be identified as one of two different types of barcode scanners. Depending on what other scanners you may already have connected to a USB-OEM POS, you may need to change this setting to enable all devices to communicate.

Options are:

- Table Top Scanner
- Handheld Scanner

It may be necessary to switch device usage when connecting two readers/scanners of the same type to a POS system.

	 USB-OEM Device Usage = Table Top Scanner
 USB-OEM Device Usage = Handheld Scanner	

Interface Options

This feature provides for an interface-specific control mechanism.

	 Obey Scanner Configuration Host Commands
 Ignore Scanner Configuration Host Commands	

WAND EMULATION INTERFACE

WAND SIGNAL SPEED on page 48
WAND POLARITY on page 48
WAND IDLE STATE on page 49
TRANSMIT NOISE on page 49
LABEL SYMBOLOGY CONVERSION on page 50

This chapter provides feature/settings configuration for the Wand Emulation interface. Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

ENTER/EXIT PROGRAMMING MODE

Wand Signal Speed

This feature specifies the speed of the Wand output signal per nominal bar or space. Choices are:

- 330 microseconds
- 660 microseconds

	 Wand Signal Speed = 330ms
 Wand Signal Speed = 660ms	

Wand Polarity

This option specifies the polarity of the Wand output signal. Choices are:

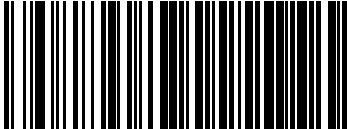

- Quiet zones and spaces are high, bars are low
- Quiet zones and spaces are low, bars are high

TTL logic levels:

0V <= Low <= 0.7V

2.4V <= High <= 5.25V

	 Wand Polarity = Quiet Zones & Spaces High, Bars Low
 Wand Polarity = Quiet Zones & Spaces Low, Bars High	

Wand Idle State

This feature specifies the level of the Wand output signal when the reader is idle.

TTL logic levels:
0V <= Low <= 0.7V
2.4V <= High <= 5.25V

	 Wand Idle State = Low
 Wand Idle State = High	

Transmit Noise

This option specifies the leading/trailing noise for the Wand interface.

	 Transmit Noise = Disable
 Transmit Noise = Transmit leading noise	
	 Transmit Noise = Transmit trailing noise
 Transmit Noise = Transmit leading and trailing noise	

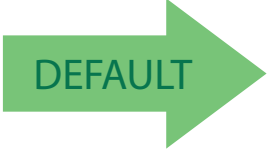

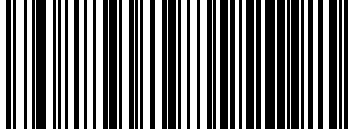

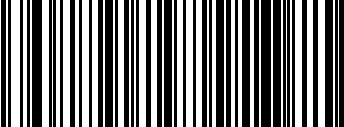

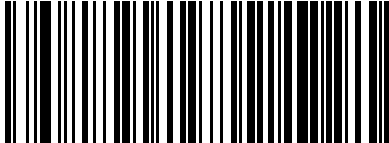

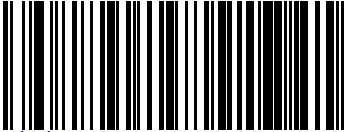

ENTER/EXIT PROGRAMMING MODE

Label Symbology Conversion

When this feature is enabled for the Wand Emulation interface, all barcode labels are converted to a single symbology.

Options are:

- No conversion
- Convert to Code 39 symbology
- Convert to Code 39 Full ASCII
- Convert to Code 128 symbology

	 Label Symbology Conversion = No conversion
 Label Symbology Conversion = Convert to Code 39	
	 Label Symbology Conversion = Convert to Code 39 Full ASCII
 Label Symbology Conversion = Convert to Code 128	

DATA FORMAT

GLOBAL PREFIX/SUFFIX on page 52
GLOBAL AIM ID on page 53
GS1-128 AIM ID on page 54
LABEL ID starting on page 55 <ul style="list-style-type: none">• Label ID: Pre-loaded Sets• Label ID: Set Individually Per Symbology• Label ID Control• Label ID Symbology Selection• Set Global Mid Label ID Characters
CASE CONVERSION on page 64
CHARACTER CONVERSION on page 64

The features in this chapter can be used to build specific user-defined data into a message string. See “References” starting on [page 244](#) for more detailed instructions on setting these features.

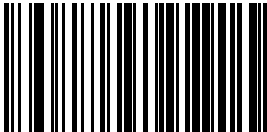

ENTER/EXIT PROGRAMMING MODE

Global Prefix/Suffix

This option sets up to 20 characters each from the set of ASCII characters or any hex value from 00 to FF. The characters may be added as a prefix (in a position before the barcode data, also called a header) and/or as a suffix (in a position following the barcode data, also called a footer). See [page 245](#) for more detailed instructions on setting this feature.

To configure this feature, scan the ENTER/EXIT PROGRAMMING MODE barcode above to place the unit in Programming Mode, then the “Set Global Prefix” or “Set Global Suffix,” barcode followed by the digits (in hex) from the Alphanumeric characters in [Appendix D, Keypad](#) representing your desired character(s). If less than the expected string of 20 characters are selected, scan the ENTER/EXIT barcode to terminate the string. Exit programming mode by scanning the ENTER/EXIT barcode again.

	<div> Set Global Prefix</div>
<div> Set Global Suffix</div>	

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

No Global Prefix
Global Suffix = 0x0D (CR)

Global AIM ID

This feature enables/disables addition of AIM IDs for all symbology types.

AIM label identifiers (as opposed to custom characters you select yourself as with label identifiers) can be included with scanned barcode data. AIM label identifiers consist of three characters as follows:

- A close brace character (ASCII '['), followed by...
- A code character (see the table below), followed by...
- A modifier character (the modifier character is symbol dependent).

SYMBOLGY	CHAR	SYMBOLGY	CHAR
UPC/EAN	E ^a	Code 128/GS1-128	C
Code 39 and Code 32	A	DataBar Omnidirectional, DataBar Expanded	e
Codabar	F	Standard 2 of 5	S
Interleaved 2 of 5	I	ISBN	X ^b
Code 93	G	Code 11	H

- a. UPC-A and UPC-E labels are converted to EAN 13 when adding AIM IDs.
b. ISBN (X with a 0 modifier character)

Global AIM ID = Disable

Global AIM ID = Enable

ENTER/EXIT PROGRAMMING MODE

GS1-128 AIM ID

If Global AIM ID is disabled, the AIM ID for GS1-128 can be enabled/disabled independently. The AIM ID for GS1-128 is a]C1,]C2 or]C3.

AIM IDs for other symbologies can be enabled/disabled independently as well. Contact Customer Support for assistance

	<div><p>GS1-128 AIM ID = Disable</p></div>
<div><p>GS1-128 AIM ID = Enable</p></div>	<div></div>

Label ID

A Label ID is a customizable code of up to three ASCII characters (each can be one of hex 0x01-0xFF), used to identify a barcode (symbology) type. It can be appended previous to or following the transmitted barcode data depending upon how this option is enabled. This feature provides options for configuring custom Label IDs as a pre-loaded set (see "Label ID: Pre-loaded Sets" below) or individually per symbology (see "Label ID: Set Individually Per Symbology" on page 55). If you wish to program the reader to always include an industry standard label identifier for ALL symbology types, see the previous feature "Global AIM ID" on page 53.

See [Label ID, starting on page 247](#) of "References" for more information on setting this feature.

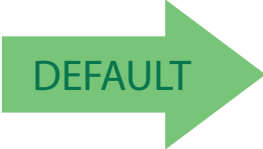

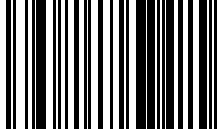

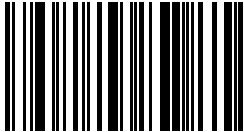

Label ID: Pre-loaded Sets

The reader supports two pre-loaded sets of Label IDs. See [Label ID: Pre-loaded Sets, starting on page 247](#) for details on the USA set and the EU set.

CAUTION

When changing from one Label ID set to another, all other reader configuration settings, including the host interface type, will be erased and set to the standard factory defaults. Any custom configuration or custom defaults will be lost.

	 Label ID Pre-loaded Set = USA Set
 Label ID Pre-loaded Set = EU Set	

Label ID: Set Individually Per Symbology

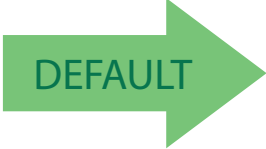

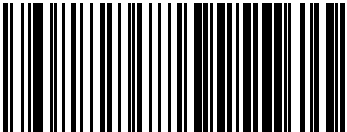

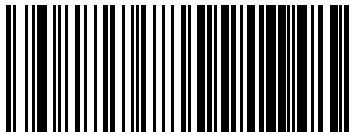

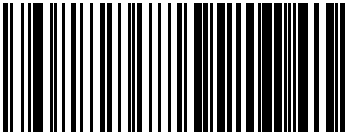

This feature configures a Label ID individually for a single symbology. See [Label ID: Set Individually Per Symbology, starting on page 249](#) for detailed instructions on setting this feature.

ENTER/EXIT PROGRAMMING MODE

Label ID Control

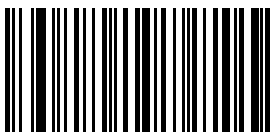

This option controls whether a Label ID is disabled, or sent as a prefix or suffix for a given symbology type.

	 Label ID Transmission = Disable
 Label ID Transmission = Enable as Prefix	
	 Label ID Transmission = Enable as Suffix
 CANCEL	Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

Label ID Symbology Selection

This option selects the symbology for which a Label ID is to be configured. See "Label ID" on [page 55](#) or [page 249](#) in "References" for more detailed instructions.

Set Global Mid Label ID Characters

Specifies mid-label ID that is added for transmission between the labels of a two-label pair.

To configure this feature, scan the ENTER/EXIT PROGRAMMING MODE barcode above to place the unit in Programming Mode, then the “Set Global Mid Label ID Character(s)” barcode followed by the digits (in hex) from the Alphanumeric characters in [Appendix D, Keypad](#) representing your desired character(s). If less than the expected string of 20 characters are selected, scan the ENTER/EXIT barcode to terminate the string. Exit programming mode by scanning the ENTER/EXIT barcode again.

 Set Global Mid Label ID Character(s)	
---	--

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

No Mid Label ID
Character (00)

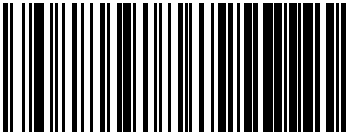

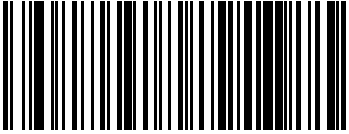

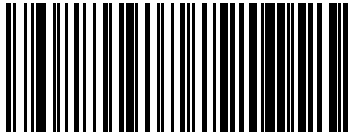

ENTER/EXIT PROGRAMMING MODE

Case Conversion

This feature allows conversion of the case of all alphabetic characters to upper or lower case.

Case conversion affects ONLY scanned barcode data, and does not affect Label ID, Prefix, Suffix, or other appended data.

	 Case Conversion = Disable (no case conversion)
 Case Conversion = Convert to upper case	
	 Case Conversion = Convert to lower case

Character Conversion

Character conversion is an eight byte configuration item. The eight bytes are 4 character pairs represented in hexadecimal ASCII values. The first character in the pair is the character that will be converted. The second character in the pair is the character to convert to. If the character to convert in a pair is FF, then no conversion is done.

If less than the expected string of 16 characters are selected, scan the ENTER/EXIT barcode twice to accept the selections and exit Programming Mode.

	 Configure Character Conversion
--	--

**0xFFFFFFFFFFFFFFF
(No character conversion)**

READING PARAMETERS

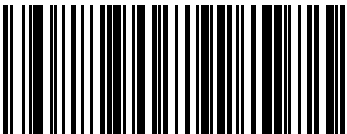

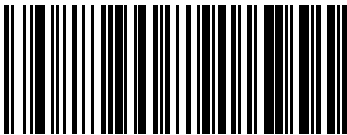

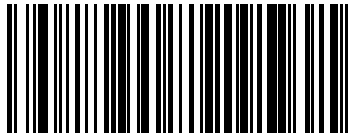

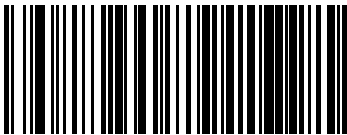

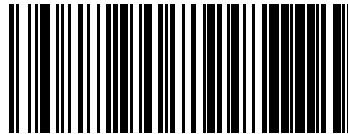

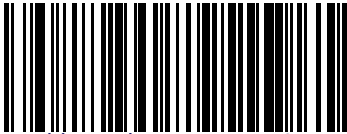

DOUBLE READ TIMEOUT on page 66	GOOD READ BEEP VOLUME on page 71
LABEL GONE TIMEOUT on page 67	GOOD READ LED DURATION on page 72
POWER ON ALERT on page 68	SCAN MODE on page 73
GOOD READ: WHEN TO INDICATE on page 68	SCANNING ACTIVE TIME on page 74
GOOD READ BEEP TYPE on page 69	FLASH ON TIME on page 74
GOOD READ BEEP FREQUENCY on page 69	FLASH OFF TIME on page 75
GOOD READ BEEP LENGTH on page 70	GREEN SPOT DURATION on page 75

ENTER/EXIT PROGRAMMING MODE

Double Read Timeout

Double Read Timeout prevents a double read of the same label by setting the minimum time allowed between reads of labels of the same symbology and data. If the unit reads a label and sees the same label again within the specified timeout, the second read is ignored. Double Read Timeout does not apply to scan modes that require a trigger pull for each label read.

	<div><p>Double Read Timeout = 0.1 Second</p></div>
<div><p>Double Read Timeout = 0.2 Second</p></div>	
	<div><p>Double Read Timeout = 0.3 Second</p></div>
<div><p>Double Read Timeout = 0.4 Second</p></div>	
	<div><p>Double Read Timeout = 0.5 Second</p></div>
<div><p>Double Read Timeout = 0.6 Second</p></div>	<div></div>
	<div><p>Double Read Timeout = 0.7 Second</p></div>

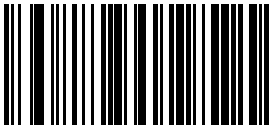

Double Read Timeout (continued)

 Double Read Timeout = 0.8 Second	
	 Double Read Timeout = 0.9 Second
 Double Read Timeout = 1 Second	

Label Gone Timeout

This feature sets the time after the last label segment is seen before the reader prepares for a new label. The timeout can be set within a range of 10 milliseconds to 2,550 milliseconds (2.55 seconds) in 10ms increments. Label Gone Timeout does not apply to scan modes that require a trigger pull for each label that is read. See [page 252](#) in “References” for detailed instructions and examples for setting this feature.

 Select Label Gone Timeout Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

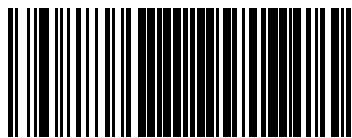

016 = Timeout of 160 ms

LED AND BEEPER INDICATORS

Power On Alert

Disables or enables the indication (from the Beeper) that the reader is receiving power.

	 Power On Alert = Disable (No Audible Indication)
 Power On Alert = Four Beeps	 DEFAULT

Good Read: When to Indicate

This feature specifies when the reader will provide indication (beep and/or flash its green LED) upon successfully reading a barcode. .

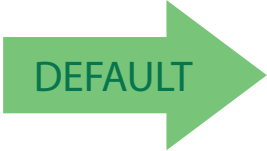

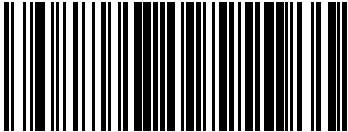

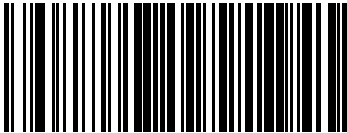

This option, which uses CTS, is only valid for RS-232 interfaces.

 DEFAULT	 Indicate Good Read = After Decode
 Indicate Good Read = After Transmit	
	 Indicate Good Read = After CTS Goes Inactive, Then Active

Good Read Beep Type

Specifies whether the good read beep has a mono or bitonal beep sound.

	 Good Read Beep Type = Mono
 Good Read Beep Type = Bitonal	

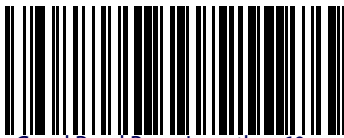

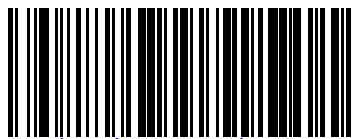

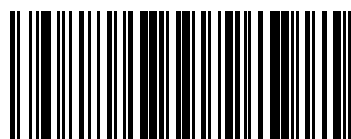

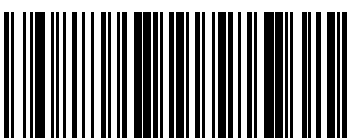

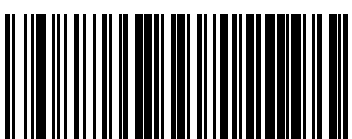

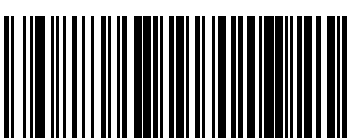

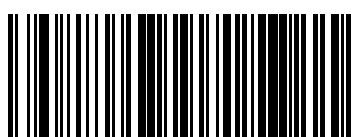

Good Read Beep Frequency

Adjusts the good read beep to sound at a selectable low, medium or high frequency, selectable from the list below. (Controls the beeper’s pitch/tone.)

	 Good Read Beep Frequency = Low
 Good Read Beep Frequency = Medium	
	 Good Read Beep Frequency = High

Good Read Beep Length

	 Good Read Beep Length = 60 msec
 Good Read Beep Length = 80 msec	
	 Good Read Beep Length = 100 msec
 Good Read Beep Length = 120 msec	
	 Good Read Beep Length = 140 msec
 Good Read Beep Length = 160 msec	
	 Good Read Beep Length = 180 msec
 Good Read Beep Length = 200 msec	

Good Read Beep Volume

Selects the beeper volume (loudness) upon a good read beep. There are three selectable volume levels.

	 Good Read Beep Volume = Beeper Off
 Good Read Beep Volume = Low	
	 Good Read Beep Volume = Medium
 Good Read Beep Volume = High	

Good Read LED Duration

This feature specifies the amount of time that the Good Read LED remains on following a good read. The good read LED on time can be set within a range of 10 milliseconds to 2,550 milliseconds (0.001 to 2.55 seconds) in 100ms increments.

See [page 253](#) in “References” for detailed instructions and examples for setting this feature.

 Select Good Read LED Duration Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

003 = Good Read LED stays on for 300 ms

Indicators are dimmed during sleep.

SCANNING FEATURES

Scan Mode

Selects the reader’s scan operating mode. See [page 254](#) in “References” for descriptions.

 Scan Mode = Trigger Single	
	 Scan Mode = Trigger Hold Multiple
 Scan Mode = Trigger Pulse Multiple	
	 Scan Mode = Flashing ^a
 Scan Mode = Always On ^b	

- a. Recommended scan mode for hands-free stand mode operation.
- b. See ["Laser Features" starting on page 227](#) for additional laser programmable timeout options.

Scanning Active Time

This setting specifies the amount of time that the reader stays in scan ON state once the state is entered. The range for this setting is from 1 to 255 seconds in 1-second increments. See [page 255](#) in “References” for descriptions of each feature

 Select Scanning Active Time Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

005 = Scanning is active for 5 Seconds

Flash On Time

This feature specifies the ON time for the indicator LED while in Flash Mode. The selectable range is 100 to 9,900 milliseconds (0.1 to 9.9 seconds), in 100 millisecond increments. See [page 256](#) in “References” for detailed information on setting this feature.

 Select Flash ON Time Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

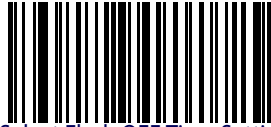

10 = Flash is ON for 1 Second

Flash Off Time

This feature specifies the OFF time for the indicator LED while in Flash Mode. The selectable range is 100 to 9,900 milliseconds (0.1 to 9.9 seconds), in 100 millisecond increments. See [page 257](#) in “References” for detailed information on setting this feature.

 Select Flash OFF Time Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

06 = Flash is OFF for 600ms

Green Spot Duration

Specifies the duration of the good read pointer beam after a good read.

	 Green Spot Duration = Disable (Green Spot is Off)
 Green Spot Duration = Short (300 msec)	
	 Green Spot Duration = Medium (500 msec)
 Green Spot Duration = Long (800 msec)	

NOTES

CODE SELECTION

The reader supports the following symbologies (barcode types). Symbology-dependent options for each symbology are included in this chapter.

CODE EAN/UPC on page 79	STANDARD 2 OF 5 on page 148
• Coupon Control	INDUSTRIAL 2 OF 5 on page 154
• UPC-A	• Code IATA
• UPC-E	CHINA POSTAL CODE on page 161
• EAN 13 (Jan 13)	CODABAR on page 167
• ISSN	• ABC Codabar
• EAN 8 (Jan 8)	CODE 11 on page 182
• UPC/EAN Global Settings	GS1 DATABAR™ OMNIDIRECTIONAL on page 191
CODE 39 on page 106	• GS1 DataBar™ Omnidirectional
• Code 32 (ITAL Pharmaceutical Code)	• GS1 DataBar™ Expanded
• Code 39 CIP (French Pharmaceutical)	• GS1 DataBar™ Limited
CODE 128 on page 121	CODE 93 on page 199
• GS1-128	MSI on page 207
CODE ISBT 128 on page 132	PLESSEY on page 213
CODABLOCK F on page 135	CODE 4 on page 221
INTERLEAVED 2 OF 5 (I 2 OF 5) on page 139	CODE 5 on page 222
• Follett 2 of 5	
• Interleaved 2 of 5 CIP HR	

Default settings are indicated at each feature/option with a green arrow. Also reference [Appendix B, Standard Defaults](#) for a listing of the most widely used set of standard factory settings. That section also provides space to record any custom settings needed or implemented for your system.

To set most features:

1. Scan the ENTER/EXIT PROGRAMMING barcode at the top of applicable programming pages.
2. Scan the correct barcode to set the desired programming feature or parameter. You may need to cover unused barcodes on the page, and possibly the facing page, to ensure that the reader reads only the barcode you intend to scan.

3. If additional input parameters are needed, go to [Appendix D, Keypad](#), and scan the appropriate characters from the keypad.

Additional information about many features can be found in the “References” chapter.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

4. Complete the programming sequence by scanning the ENTER/EXIT PROGRAMMING barcode to exit Programming Mode.

DISABLE ALL SYMBOLOGIES

Use this feature to disable all symbolologies.

1. Scan the ENTER/EXIT PROGRAMMING barcode below.
2. Scan the Disable All Symbolologies barcode.
3. Complete the programming sequence by scanning the ENTER/EXIT PROGRAMMING barcode.

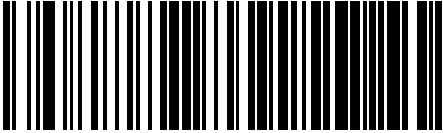

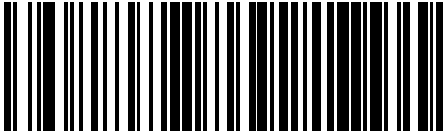

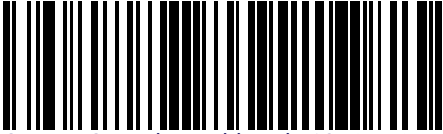

This does not disable the reading of programming labels.

CODE EAN/UPC

Coupon Control

This feature is used to control the reader’s method of processing coupon labels.

	 Coupon Control = Allow all coupon barcodes to be decoded
 Coupon Control = Enable only UPCA coupon decoding	
	 Coupon Control = Enable only GS1 DataBar™ coupon decoding

UPC-A

The following options apply to the UPC-A symbology.

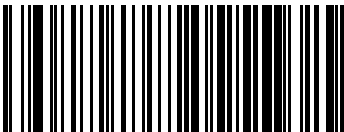

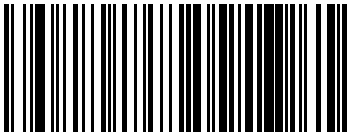

UPC-A Enable/Disable

When disabled, the reader will not read UPC-A barcodes.

	 UPC-A = Disable
 UPC-A = Enable	

UPC-A Check Character Transmission

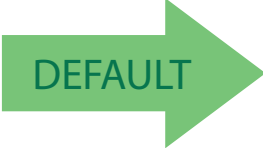

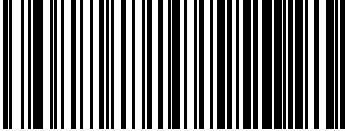

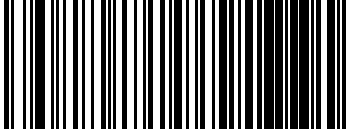

Enable this option to transmit the check character along with UPC-A barcode data.

	 UPC-A Check Character Transmission = Don't Send
 UPC-A Check Character Transmission = Send	

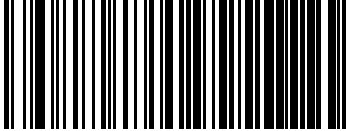

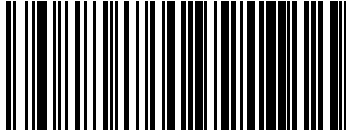

Expand UPC-A to EAN-13

Expands UPC-A data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

	 UPC-A to EAN-13 = Don't Expand
 UPC-A to EAN-13 = Expand	

UPC-A Number System Character Transmission

This feature enables/disables transmission of the UPC-A number system character.

	 UPC-A Number System Character = Do not transmit
 UPC-A Number System Character = Transmit	

UPC-A Minimum Reads

This feature specifies the minimum number of consecutive times a UPC-A label must be decoded before it is accepted as a good read.

	 UPC-A Minimum Reads = 1
 UPC-A Minimum Reads = 2	
	 UPC-A Minimum Reads = 3
 UPC-A Minimum Reads = 4	

UPC-E

The following options apply to the UPC-E symbology.

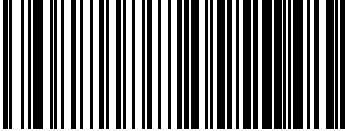

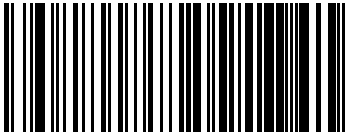

UPC-E Enable/Disable

When disabled, the reader will not read UPC-E barcodes.

	 UPC-E = Disable
 UPC-E = Enable	

UPC-E Check Character Transmission

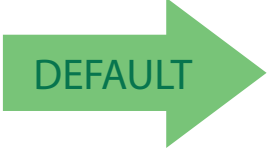

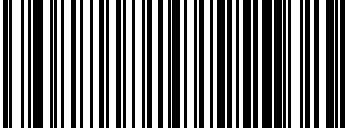

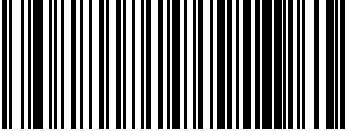

Enable this option to transmit the check character along with UPC-E barcode data.

	 UPC-E Check Character Transmission = Don't Send
 UPC-E Check Character Transmission = Send	

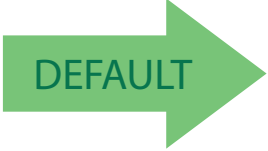

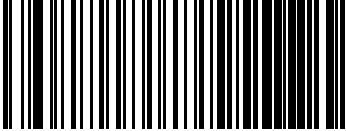

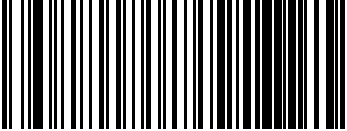

Expand UPC-E to EAN-13

Expands UPC-E data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

	 UPC-E to EAN-13 = Don't Expand
 UPC-E to EAN-13 = Expand	

Expand UPC-E to UPC-A

Expands UPC-E data to the UPC-A data format.

	 UPC-E to UPC-A = Don't Expand
 UPC-E to UPC-A = Expand	

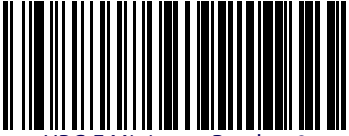

UPC-E Number System Character Transmission

This feature enables/disables transmission of the UPC-E system number character.

	 UPC-E Number System Character = Do not transmit
 UPC-E Number System Character = Transmit	

UPC-E Minimum Reads

Specifies the minimum number of consecutive times a UPC-E label must be decoded before it is accepted as a good read.

	 UPC-E Minimum Reads = 1
 UPC-E Minimum Reads = 2	
	 UPC-E Minimum Reads = 3
 UPC-E Minimum Reads = 4	

GTIN FORMATTING

This feature enables/disables the ability to convert UPC-E, UPC-A, EAN 8, and EAN 13 labels into the GTIN 14-character format.

If add-on information is present on the base label prior to the conversion taking place, the add-on information will be appended to the converted GTIN label.

	 GTIN Formatting = Disable
 GTIN Formatting = Enable	

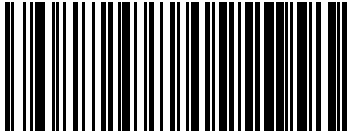

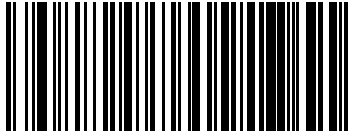

EAN 13 (JAN 13)

The following options apply to the EAN 13 (Jan 13) symbology.

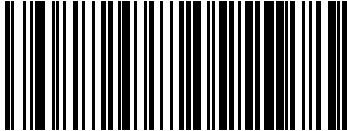

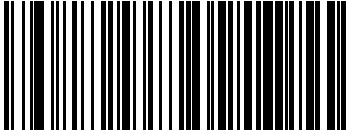

EAN 13 Enable/Disable

When disabled, the reader will not read EAN 13/JAN 13 barcodes.

	 EAN 13 = Disable
 EAN 13 = Enable	

EAN 13 Check Character Transmission

Enable this option to transmit the check character along with EAN 13 barcode data.

	 EAN 13 Check Character Transmission = Don't Send
 EAN 13 Check Character Transmission = Send	

EAN-13 Flag 1 Character

Enables/disables transmission of an EAN/JAN13 Flag1 character. The Flag 1 character is the first character of the label.

	 EAN-13 Flag 1 Char= Don't transmit
 EAN-13 Flag 1 Char= Transmit	

EAN-13 ISBN Conversion

This option enables/disables conversion of EAN 13/JAN 13 Bookland labels starting with 978 to ISBN labels.

	 EAN-13 ISBN Conversion = Disable
 EAN-13 ISBN Conversion = Convert to ISBN	

EAN 13 Minimum Reads

This feature specifies the minimum number of consecutive times an EAN 13 label must be decoded before it is accepted as good read.

	 EAN 13 Minimum Reads = 1
 EAN 13 Minimum Reads = 2	
	 EAN 13 Minimum Reads = 3
 EAN 13 Minimum Reads = 4	

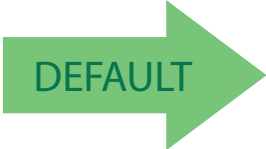

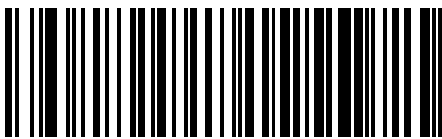

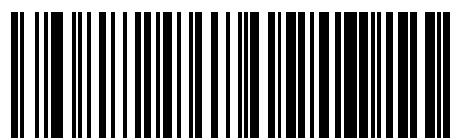

ISSN

The following options apply to the ISSN symbology.

ISSN Enable/Disable

Enables/disables conversion of EAN/JAN13 Bookland labels starting with 977 to ISSN labels.

	 ISSN = Disable
 ISSN = Enable	

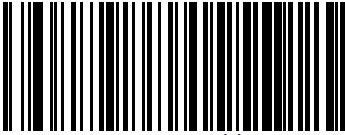

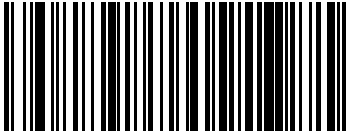

EAN 8 (JAN 8)

The following options apply to the EAN 8 (Jan 8) symbology.

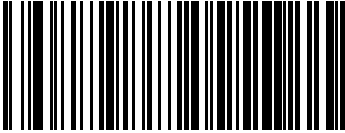

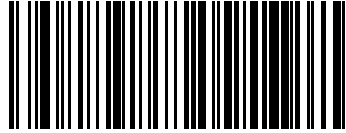

EAN 8 Enable/Disable

When disabled, the reader will not read EAN 8/JAN 8 barcodes.

	 EAN 8 = Disable
 EAN 8 = Enable	

EAN 8 Check Character Transmission

Enable this option to transmit the check character along with EAN 8 barcode data.

	 EAN 8 Check Character Transmission = Don't Send
 EAN 8 Check Character Transmission = Send	

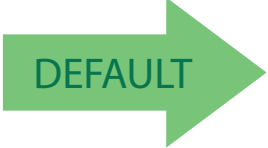

EAN 8 (Jan 8)

ENTER/EXIT PROGRAMMING MODE

Expand EAN 8 to EAN 13

Enable this option to expand EAN 8/JAN 8 labels to EAN 13/JAN 13.

	 Expand EAN 8 to EAN 13 = Disable
 Expand EAN 8 to EAN 13 = Enable	

EAN 8 Minimum Reads

This feature specifies the minimum number of consecutive times an EAN 8 (Jan 8) label must be decoded before it is accepted as good read.

	 EAN 8 Minimum Reads = 1
 EAN 8 Minimum Reads = 2	
	 EAN 8 Minimum Reads = 3
 EAN 8 Minimum Reads = 4	

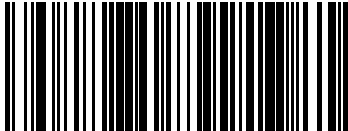

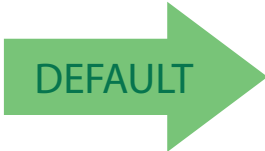

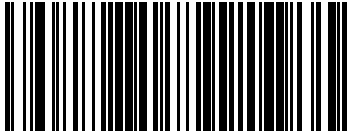

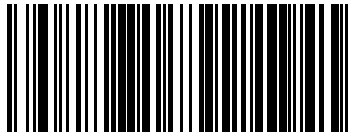

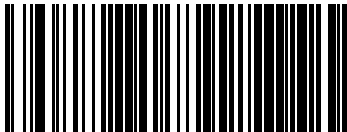

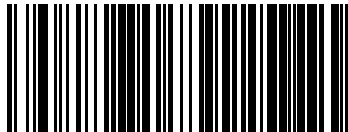

UPC/EAN GLOBAL SETTINGS

This section provides configuration settings for UPC-A, UPC-E, EAN 13 and EAN 8 symbologies, and affects all of these unless otherwise marked for each feature description.

UPC/EAN Decoding Level

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer’s needs.

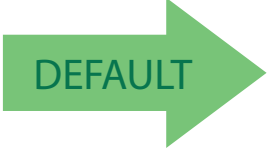

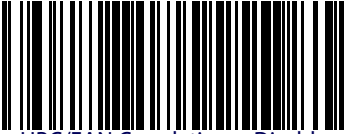

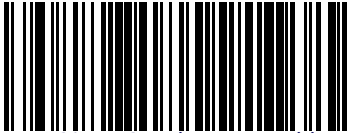

See [page 242](#) for more information on this feature.

 UPC/EAN Decoding Level = 1 (Conservative)	
	 UPC/EAN Decoding Level = 2
 UPC/EAN Decoding Level = 3	
	 UPC/EAN Decoding Level = 4
 UPC/EAN Decoding Level = 5 (Aggressive)	

UPC/EAN Correlation

When correlation is enabled, the reader will combine label data from multiple scans when decoding. This will help the scanner read labels that have spots, voids and/or damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 UPC/EAN Correlation = Disable
 UPC/EAN Correlation = Enable	

UPC/EAN Price Weight Check

This feature enables/disables calculation and verification of price/weight check digits.

	 Price Weight Check = Disabled
 Price Weight Check = 4-digit price-weight check	
	 Price Weight Check = 5-digit price-weight check
 Price Weight Check = European 4-digit price-weight check	
	 Price Weight Check = European 5-digit price-weight check

In-Store Minimum Reads

This feature specifies the minimum number of consecutive times an in-store label must be decoded before it is accepted as good read.

In-store labels are defined as UPC-A labels with a number-system character of 2 or 4 as well as EAN 8 and EAN 13 labels with a Flag1 character of 2 or an EAN 13 label starting with the three characters '980'.

	<div> In-Store Minimum Reads = 1</div>
<div> In-Store Minimum Reads = 2</div>	<div></div>
	<div> In-Store Minimum Reads = 3</div>
<div> In-Store Minimum Reads = 4</div>	

ADD-ONS

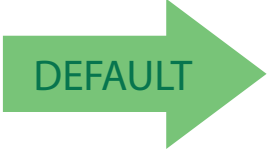

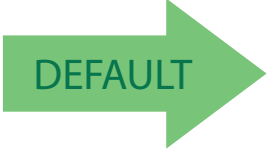

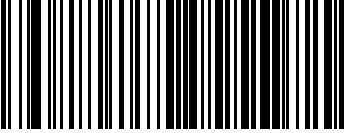

Contact Customer Support for advanced programming of optional and conditional add-ons.

Optional Add-ons

The reader can be enabled to optionally read the following add-ons (supplementals):

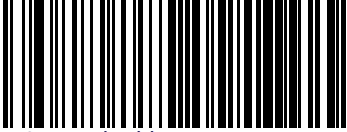

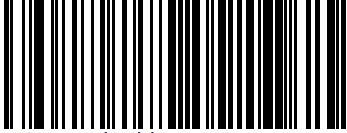

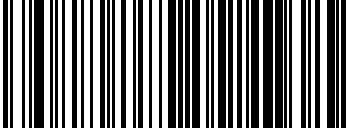

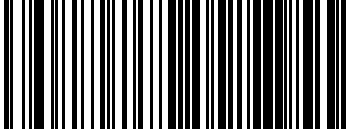

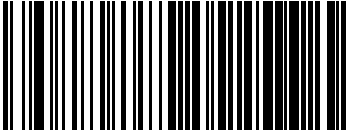

If a UPC/EAN base label and an add-on are both decoded, the reader will transmit the base label and add-on. If a UPC/EAN base label is decoded without an add-on, the base label will be transmitted without an add-on. Conditional add-on settings (if enabled) are considered by the reader before optional add-on settings.

	 Optional Add-Ons = Disable P2
 Optional Add-Ons = Enable P2	
	 Optional Add-Ons = Disable P5
 Optional Add-Ons = Enable P5	
	 Optional Add-Ons = Disable GS1-128
 Optional Add-Ons = Enable GS1-128	

Optional Add-On Timer

This option sets the time the reader will look for an add-on when an add-on fragment has been seen and optional add-ons are enabled. (Also see ["Optional GS1-128 Add-On Timer" on page 100.](#))

 Optional Add-on Timer = 10ms	
	 Optional Add-on Timer = 20ms
 Optional Add-on Timer = 30ms	
	 Optional Add-on Timer = 40ms
 Optional Add-on Timer = 50ms	

Optional Add-On Timer (continued)

	 Optional Add-on Timer = 60ms
 Optional Add-on Timer = 70ms	
	 Optional Add-on Timer = 100ms
 Optional Add-on Timer = 120ms	
	 Optional Add-on Timer = 140ms
 Optional Add-on Timer = 160ms	

ENTER/EXIT PROGRAMMING MODE

Optional Add-On Timer

Optional Add-On Timer (continued)

	 Optional Add-on Timer = 180ms
 Optional Add-on Timer = 200ms	
	 Optional Add-on Timer = 220ms
 Optional Add-on Timer = 240ms	
	 Optional Add-on Timer = 260ms
 Optional Add-on Timer = 280ms	
	 Optional Add-on Timer = 300ms

Optional GS1-128 Add-On Timer

This option sets the timer expiration value to read the added part after reading the linear EAN/UPC part. For UPC/EAN add-ons other than those of that type, see ["Optional Add-On Timer" on page 97](#).

	 Optional GS1-128 Add-On Timer = Disable
 Optional GS1-128 Add-On Timer = 10ms	
	 Optional GS1-128 Add-On Timer = 20ms
 Optional GS1-128 Add-On Timer = 30ms	
	 Optional GS1-128 Add-On Timer = 40ms
 Optional GS1-128 Add-On Timer = 50ms	

ENTER/EXIT PROGRAMMING MODE

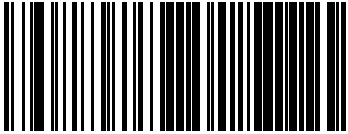

Optional GS1-128 Add-On Timer

Optional GS1-128 Add-On Timer (continued)

	 Optional GS1-128 Add-On Timer = 60ms
 Optional GS1-128 Add-On Timer = 70ms	
	 Optional GS1-128 Add-On Timer = 100ms
 Optional GS1-128 Add-On Timer = 120ms	
	 Optional GS1-128 Add-On Timer = 140ms
 Optional GS1-128 Add-On Timer = 160ms	

Optional GS1-128 Add-On Timer (continued)

	 Optional GS1-128 Add-On Timer = 180ms
 Optional GS1-128 Add-On Timer = 200ms	
	 Optional GS1-128 Add-On Timer = 220ms
 Optional GS1-128 Add-On Timer = 240ms	
	 Optional GS1-128 Add-On Timer = 260ms
 Optional GS1-128 Add-On Timer = 280ms	
	 Optional GS1-128 Add-On Timer = 300ms

P2 Add-Ons Minimum Reads

This feature specifies the minimum number of times a P2 add-on must be read before it is marked as valid and then combined with a base label.

	<div><p>P2 Add-Ons Minimum Reads = 1</p></div>
<div><p>P2 Add-Ons Minimum Reads = 2</p></div>	<div></div>
	<div><p>P2 Add-Ons Minimum Reads = 3</p></div>
<div><p>P2 Add-Ons Minimum Reads = 4</p></div>	

P5 Add-Ons Minimum Reads

This feature specifies the minimum number of times a P5 add-on must be read before it is marked as valid and then combined with a base label.

	 P5 Add-Ons Minimum Reads = 1
 P5 Add-Ons Minimum Reads = 2	
	 P5 Add-Ons Minimum Reads = 3
 P5 Add-Ons Minimum Reads = 4	

GS1-128 Add-Ons Minimum Reads

This feature specifies the minimum number of times an GS1-128 add-on must be read before it is marked as valid and then combined with a base label.

	 GS1-128 Add-Ons Minimum Reads = 1
 GS1-128 Add-Ons Minimum Reads = 2	
	 GS1-128 Add-Ons Minimum Reads = 3
 GS1-128 Add-Ons Minimum Reads = 4	

CODE 39

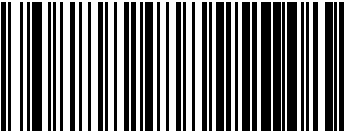

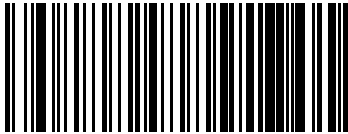

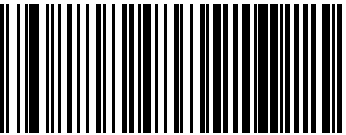

The following options apply to the Code 39 symbology.

Code 39 Enable/Disable

	 Code 39 = Disable
 Code 39 = Enable	

Code 39 Check Character Calculation

Enable this option to enables/disables calculation and verification of an optional Code 39 check character. When disabled, any check character in the label is treated as a data character

	 Code 39 Check Character Calculation = Don't Calculate
 Code 39 Check Character Calculation = Calculate Std Check	
	 Code 39 Check Character Calculation = Calculate Mod 7 Check

ENTER/EXIT PROGRAMMING MODE

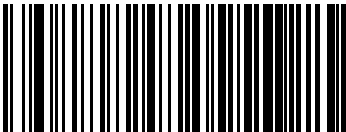

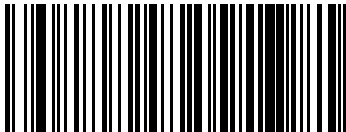

Code 39 Check Character Transmission

Code 39 Check Character Calculation (continued)

 Code 39 Check Character Calculation = Enable Italian Post Check	
	 Code 39 Check Character Calculation = Enable Daimler Chrysler Check

Code 39 Check Character Transmission

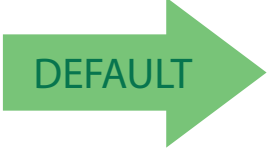

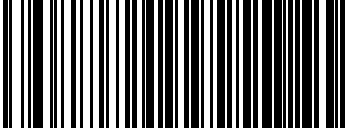

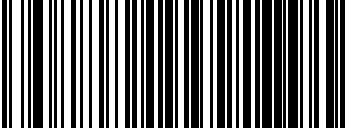

Enable this option to transmit the check character along with Code 39 barcode data.

	 Code 39 Check Character Transmission = Don't Send
 Code 39 Check Character Transmission = Send	

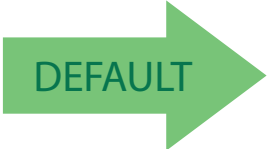

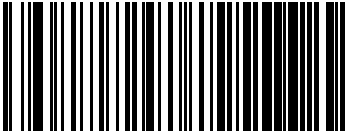

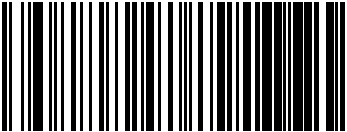

Code 39 Start/Stop Character Transmission

Enable this option to enable/disable transmission of Code 39 start and stop characters.

	 Code 39 Start/Stop Character Transmission = Don't Transmit
 Code 39 Start/Stop Character Transmission = Transmit	

Code 39 Full ASCII

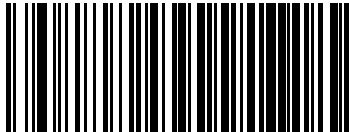

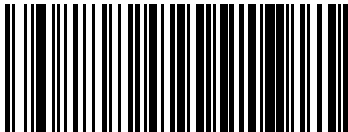

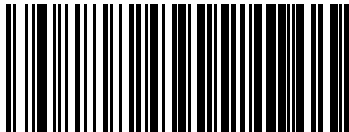

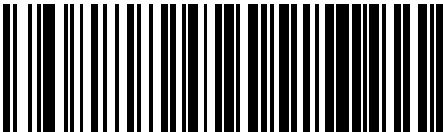

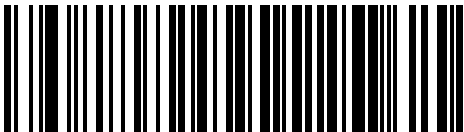

Enables/disables the translation of Code 39 characters to Code 39 full-ASCII characters.

	 Code 39 Full ASCII = Disable
 Code 39 Full ASCII = Enable	

Code 39 Quiet Zones

This feature specifies the number of quiet zones for Code 39 labels. Quiet zones are blank areas at the ends of a barcode, typically 10 times the width of the narrowest bar or space in the label.

 Code 39 Quiet Zones = Quiet Zone on one side	
	 Code 39 Quiet Zones = Quiet Zones on two sides
 Code 39 Quiet Zones = Auto	
	 Code 39 Quiet Zones = Virtual Quiet Zones on two sides
 Code 39 Quiet Zones = Small Quiet Zones on two sides	

Code 39 Minimum Reads

This feature specifies the minimum number of consecutive times a Code 39 label must be decoded before it is accepted as good read.

	 Code 39 Minimum Reads = 1
 Code 39 Minimum Reads = 2	
	 Code 39 Minimum Reads = 3
 Code 39 Minimum Reads = 4	

Code 39 Decoding Level

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer’s needs. See [page 242](#) for more information on this feature.

This configuration item applies to Code 39 and Code 32.

 Code 39 Decoding Level = 1 (Conservative)	
	 Code 39 Decoding Level = 2
 Code 39 Decoding Level = 3	
	 Code 39 Decoding Level = 4
 Code 39 Decoding Level = 5 (Aggressive)	

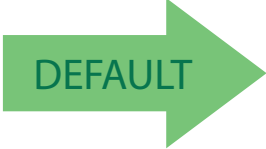

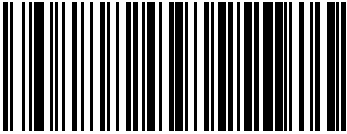

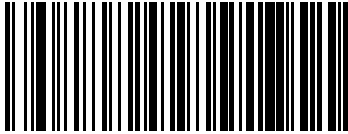

Code 39 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Code 39 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Code 39 Length Control = Variable Length
 Code 39 Length Control = Fixed Length	

Code 39 Set Length 1

This feature specifies one of the barcode lengths for [Code 39 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 0 to 50 characters.

Table 2 provides examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 2. Code 39 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 39 LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Select Code 39 Set Length 1 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

02 = Length 1 is 2 Characters

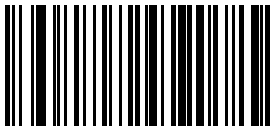

Code 39 Set Length 2

This feature specifies one of the barcode lengths for [Code 39 Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check, data, and full-ASCII shift characters. The length does not include start/stop characters.

Table 3 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 3. Code 39 Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 (Ignore This Length)	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 39 LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Code 39Length 2 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

Code 39 Interdigit Ratio

This feature specifies the ratio between an intercharacter space and module for Code 39 labels.

	 Code 39 Interdigit Ratio = Disable
 Code 39 Interdigit Ratio = 1	
	 Code 39 Interdigit Ratio = 2
 Code 39 Interdigit Ratio = 3	
	 Code 39 Interdigit Ratio = 4
 Code 39 Interdigit Ratio = 5	

Code 39

ENTER/EXIT PROGRAMMING MODE

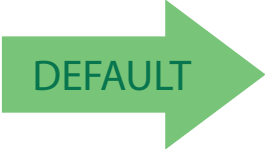

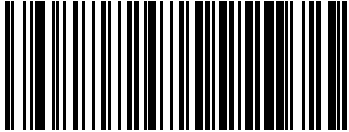

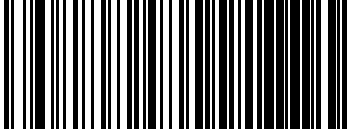

Code 39 Interdigit Ratio (continued)

	 Code 39 Interdigit Ratio = 6
 Code 39 Interdigit Ratio = 7	
	 Code 39 Interdigit Ratio = 8
 Code 39 Interdigit Ratio = 9	
	 Code 39 Interdigit Ratio = 10

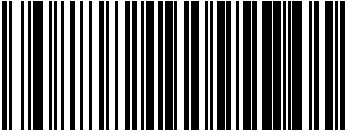

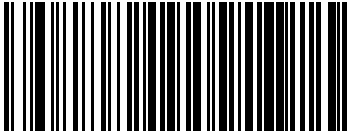

Code 39 Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 Code 39 Character Correlation = Disable
 Code 39 Character Correlation = Enable	

Code 39 Stitching

This option enables/disables stitching for Code 39 labels. When parts of a Code 39 barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader’s software, and the data will be decoded if all barcode proofing requirements are met.

	 Code 39 Stitching = Disable
 Code 39 Stitching = Enable	

CODE 32 (ITAL PHARMACEUTICAL CODE)

The following options apply to the Code 32 (Italian Pharmaceutical Code) symbology.

Code 32 Enable/Disable

When disabled, the reader will not read Code 32 barcodes.

	 Code 32 = Disable
 Code 32 = Enable	

Code 32 Feature Setting Exceptions

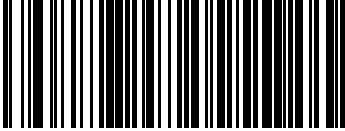

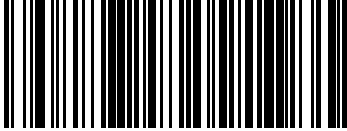

The following features are set for Code 32 by using these Code 39 settings:

- "Code 39 Quiet Zones" on page 109
- "Code 39 Minimum Reads" on page 110
- "Code 39 Decoding Level" on page 111
- "Code 39 Interdigit Ratio" on page 115
- "Code 39 Character Correlation" on page 117
- "Code 39 Stitching" on page 117

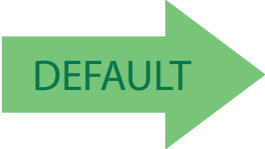

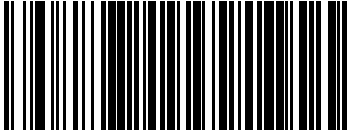

Code 32 Check Char Transmission

Enable this option to transmit the check character along with Code 32 barcode data.

	 Code 32 Check Character Transmission = Don't Send
 Code 32 Check Character Transmission = Send	

Code 32 Start/Stop Character Transmission

This option enables/disables transmission of Code 32 start and stop characters.

	 Code 32 Start/Stop Character Transmission = Don't Transmit
 Code 32 Start/Stop Character Transmission = Transmit	

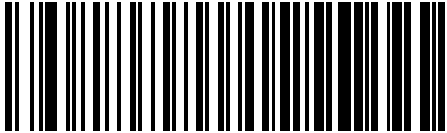

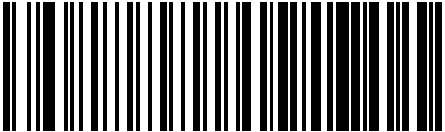

CODE 39 CIP (FRENCH PHARMACEUTICAL)

The following options apply to the Code 39 CIP symbology.

Code 39 CIP Enable/Disable

Enables/Disables ability of the reader to decode Code 39 CIP labels.

	 Code 39 CIP = Disable
 Code 39 CIP = Enable	

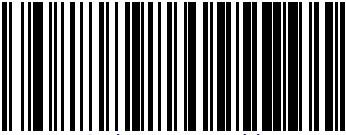

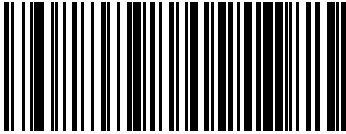

CODE 128

The following options apply to the Code 128 symbology.

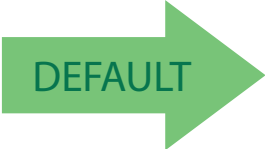

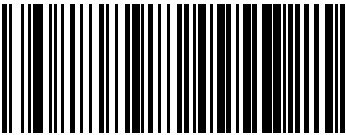

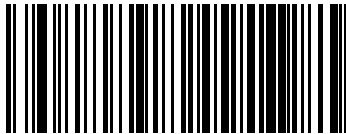

Code 128 Enable/Disable

When disabled, the reader will not read Code 128 barcodes.

	 Code 128 = Disable
 Code 128 = Enable	

Expand Code 128 to Code 39

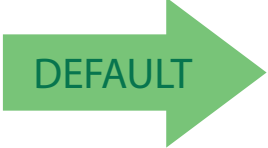

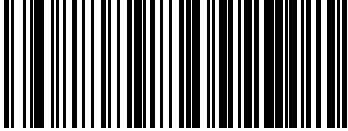

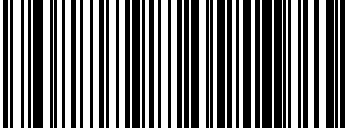

This feature enables/disables expansion of Code 128 labels to Code 39 labels.

	 Code 128 to Code 39 = Don't Expand
 Code 128 to Code 39 = Expand	

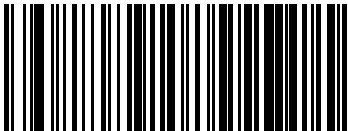

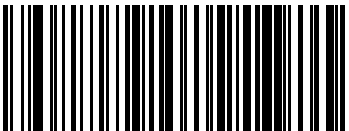

Code 128 Check Character Transmission

Enable this option to transmit the check character along with Code 128 barcode data.

	 Code 128 Check Character Transmission = Don't Send
 Code 128 Check Character Transmission = Send	

Code 128 Function Character Transmission

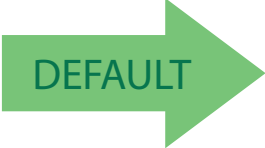

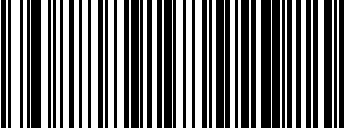

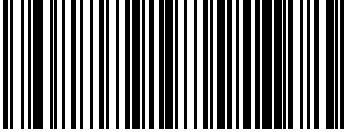

Enables/disables transmission of Code128 function characters 1, 2, 3, and 4.

	 Code 128 Function Character Transmission = Don't Send
 Code 128 Function Character Transmission = Send	

Code 128 Sub-Code Change Transmission

Enables/disables the transmission of “Sub-Code exchange” characters (NOT transmitted by standard decoding).

	 Code 128 Sub-Code Change Transmission = Disable
 Code 128 Sub-Code Change Transmission = Enable	

Code 128 Quiet Zones

This feature specifies the number of quiet zones for Code 128 labels. Quiet zones are blank areas at the ends of a barcode and are typically 10 times the width of the narrowest bar or space in the label.

	 Code 128 Quiet Zones = No Quiet Zones
 Code 128 Quiet Zones = Quiet Zone on one side	
	 Code 128 Quiet Zones = Quiet Zones on two sides
 Code 128 Quiet Zones = Auto	
	 Code 128 Quiet Zones = Virtual Quiet Zones on two sides

Code 128 Minimum Reads

This feature specifies the minimum number of consecutive times a Code 128 label must be decoded before it is accepted as good read.

	 Code 128 Minimum Reads = 1
 Code 128 Minimum Reads = 2	
	 Code 128 Minimum Reads = 3
 Code 128 Minimum Reads = 4	

Code 128 Decoding Level

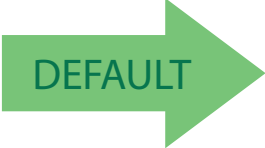

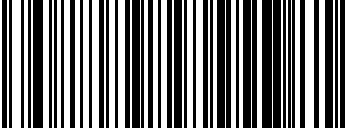

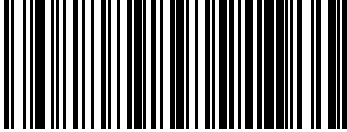

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer's needs. See [page 242](#) for more information on this feature.

 Code 128 Decoding Level = 1 (Conservative)	
	 Code 128 Decoding Level = 2
 Code 128 Decoding Level = 3	
	 Code 128 Decoding Level = 4
 Code 128 Decoding Level = 5 (Aggressive)	

Code 128 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Code 128 symbology. See [page 242](#) for more information..

	 Code 128 Length Control = Variable Length
 Code 128 Length Control = Fixed Length	

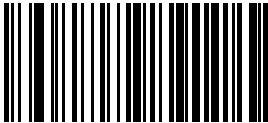

Code 128 Set Length 1

Specifies one of the barcode lengths for [Code 128 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 1 to 80 characters.

Table 4 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 4. Code 128 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Character	07 Characters	15 Characters	80 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 128 LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	‘0’ and ‘1’	‘0’ and ‘7’	‘1’ and ‘5’	‘8’ AND ‘0’
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Code 128 Set Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

01 = Length 1 is 1 Character

Code 128 Set Length 2

This feature specifies one of the barcode lengths for [Code 128 Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only.

The length can be set from 1 to 80 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 5 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 5. Code 128 Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 (Ignore This Length)	07 Characters	15 Characters	80 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 128 LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'0' and 'F'	'5' AND 0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Select Code 128 Length 2 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

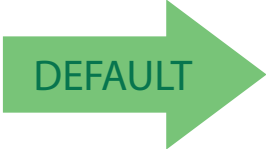

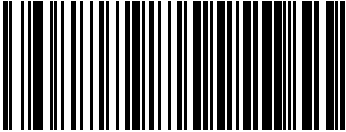

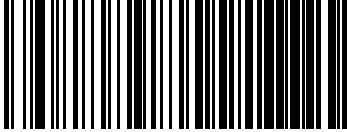

80 = Length 2 is 80 Characters

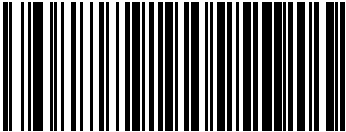

Code 128 Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

 DEFAULT	 Code 128 Character Correlation = Disable
 Code 128 Character Correlation = Enable	

Code 128 Stitching

This option enables/disables stitching for Code 128 labels. When parts of a Code 128 barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader's software, and the data will be decoded if all barcode proofing requirements are met.

	 Code 128 Stitching = Disable
 Code 128 Stitching = Enable	 DEFAULT

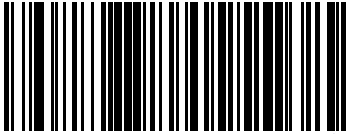

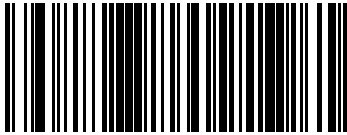

GS1-128

The following options apply to the GS1-128 symbology. (Also known as USS-128, GS1-128, GTIN-128, UCC-128, EAN-128.)

GS1-128 Enable

This option enables/disables the ability of the reader to translate GS1-128 labels to the GS1-128 data format. Options are:

- Transmit GS1-128 labels in Code 128 data format.
- Transmit GS1-128 labels in GS1-128 data format.
- Do not transmit GS1-128 labels.

	<div> GS1-128 = Transmit in Code 128 data format</div>
<div> GS1-128 = Transmit in GS1-128 data format</div>	<div></div>
	<div> GS1-128 = Do not transmit GS1-128 labels</div>

CODE ISBT 128

The following options apply to the ISBT 128 symbology.

ISBT 128 Concatenation

Use this option to enable/disable ISBT128 concatenation of 2 labels.

	 ISBN 128 Concatenation = Disable
 ISBN 128 Concatenation = Enable	

ISBT 128 Force Concatenation

When enabled, this feature forces concatenation for ISBT.

This option is only valid when **ISBT 128 Concatenation is enabled**.

	 ISBN 128 Force Concatenation = Disable
 ISBN 128 Force Concatenation = Enable	

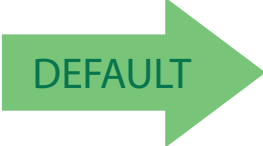

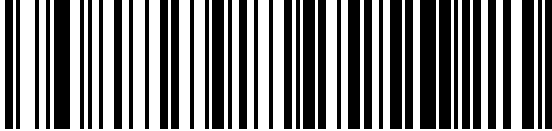

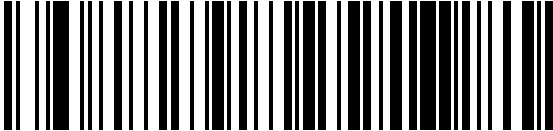

ISBT 128 Concatenation Mode

Specifies the concatenation mode between Static and Dynamic.

This option is only valid when [ISBT 128 Concatenation](#) is enabled (see page 132).

	 ISBT 128 Concatenation Mode = Static
 ISBT 128 Concatenation Mode = Dynamic	

Code ISBT 128

ENTER/EXIT PROGRAMMING MODE

ISBT 128 Dynamic Concatenation Timeout

Specifies the timeout used by the ISBT 128 Dynamic Concatenation Mode.

	<div> ISBT 128 Dynamic Concatenation Timeout = 50 msec</div>
<div> ISBT 128 Dynamic Concatenation Timeout = 100 msec</div>	
<div></div>	<div> ISBT 128 Dynamic Concatenation Timeout = 200 msec</div>
<div> ISBT 128 Dynamic Concatenation Timeout = 500 msec</div>	
	<div> ISBT 128 Dynamic Concatenation Timeout = 750 msec</div>
<div> ISBT 128 Dynamic Concatenation Timeout = 1 second</div>	

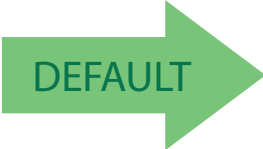

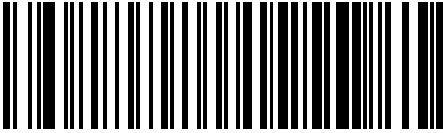

CODABLOCK F

The following options apply to the Codablock F symbology.

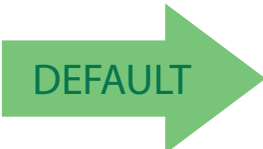

Codablock F Enable/Disable

Enables/Disables ability of reader to decode Codablock F labels.

	 Codablock F = Disable
 Codablock F = Enable	

Codablock F EAN Enable/Disable

Enables/Disables the Codablock F EAN subtype (code with FNC1 in the first position)..

	 Codablock F EAN = Disable
 Codablock F EAN = Enable	

Codablock F AIM Check

Specifies if Check Digit calculation algorithm is AIM compliant or not.

	 Codablock F AIM Check = Disable
 Codablock F AIM Check = Enable Check C	

Codablock F Length Control

This feature specifies either variable length decoding or fixed length decoding for the Codablock F symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Codablock F Length Control = Variable Length
 Codablock F = Fixed Length	

Codablock F Set Length 1

Specifies one of the barcode lengths for [Codablock F Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. Characters can be set from 03 to 255 characters.

Table 6 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 6. CODABLOCK F Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	03 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODABLOCK F LENGTH 1 SETTING				
4	Scan Three Characters From Appendix D, Keypad	'0', '0' and '3'	'0', '0' and '7'	'0','1' and '5'	'0','5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Select Codablock F Length 1 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

03 = Length 1 is 3 Characters

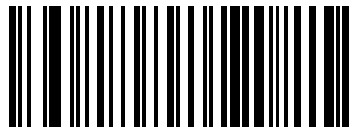

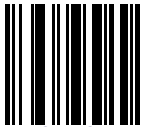

Codablock F Set Length 2

This feature specifies one of the barcode lengths for [Codablock F Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check, data, and full-ASCII shift characters. The length does not include start/stop characters.

Table 7 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 7. CODABLOCK F Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 (Ignore This Length)	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODABLOCK F LENGTH 2 SETTING				
4	Scan Three Characters From Appendix D, Keypad	'0', '0' and '0'	'0', '0' and '7'	'0','1' and '5'	'0','5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Codablock F Length 2 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

100 = Length 2 is 100 Characters

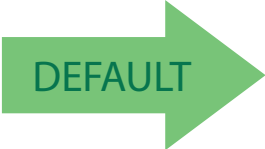

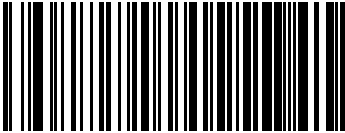

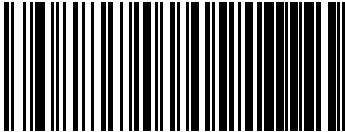

INTERLEAVED 2 OF 5 (I 2 OF 5)

The following options apply to the I 2 of 5 symbology.

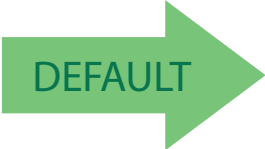

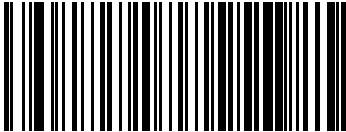

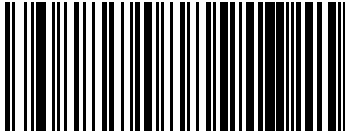

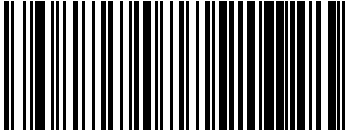

I 2 of 5 Enable/Disable

When disabled, the reader will not read I 2 of 5 barcodes.

	 I 2 of 5 = Disable
 I 2 of 5 = Enable	

I 2 of 5 Check Character Calculation

This option enables/disables calculation and verification of an optional I 2 of 5 check character.

	 I 2 of 5 Check Character Calculation = Disable
 I 2 of 5 Check Character Calculation = Check Standard (Modulo 10)	
	 I 2 of 5 Check Character Calculation = Check German Parcel

I 2 of 5 Check Character Calculation (continued)

I 2 of 5 Check Character Calculation = Check DHL

I 2 of 5 Check Character Calculation = Check Daimler Chrysler

I 2 of 5 Check Character Calculation = Check Bosch

I 2 of 5 Check Character Calculation = Italian Post

I 2 of 5 Check Character Transmission

Enable this option to transmit the check character along with I 2 of 5 barcode data.

I 2 of 5 Check Character Transmission = Don't Send

I 2 of 5 Check Character Transmission = Send

I 2 of 5 Minimum Reads

This feature specifies the minimum number of consecutive times an I 2 of 5 label must be decoded before it is accepted as good read.

	 I 2 of 5 Minimum Reads = 1
 I 2 of 5 Minimum Reads = 2	
	 I 2 of 5 Minimum Reads = 3
 I 2 of 5 Minimum Reads = 4	

2 of 5 Decoding Level

This configuration item applies to Interleaved 2 of 5, China Postal Code and Standard 2 of 5.

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer's needs. See [page 242](#) for more information on this feature.

 2 of 5 Decoding Level = 1 (Conservative)	
	 2 of 5 Decoding Level = 2
 2 of 5 Decoding Level = 3	
	 2 of 5 Decoding Level = 4
 2 of 5 Decoding Level = 5 (Aggressive)	

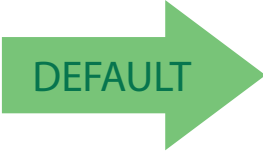

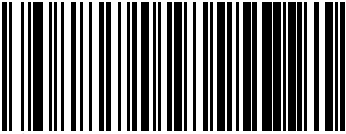

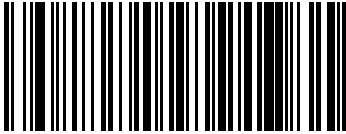

I 2 of 5 Length Control

This feature specifies either variable length decoding or fixed length decoding for the I 2 of 5 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 I 2 of 5 Length Control = Variable Length
 I 2 of 5 Length Control = Fixed Length	

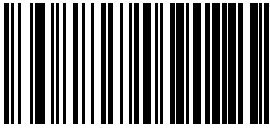

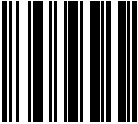

I 2 of 5 Set Length 1

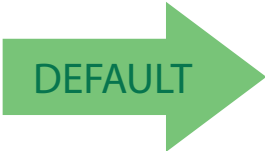

This feature specifies one of the barcode lengths for I 2 of 5 Length Control. Length 1 is the minimum label length if in Variable Length Mode, or the first fixed length if in Fixed Length Mode. The length includes the barcode’s check and data characters. The length can be set from 2 to 50 characters in increments of two.

Table 8 provides some examples for setting Length 1. See page 242 for detailed instructions on setting this feature.

Table 8. I 2 of 5 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	2 Characters	6 Characters	14 Characters	50 Characters
2	Pad with leading zeroes to yield two digits	02	06	14	50
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT I 2 of 5 LENGTH 1 SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '2'	'0' and '6'	'1' and '4'	'5' AND '0'
6	Scan ENTER/EXIT PROGRAMMING MODE				

 Select I 2 of 5 Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

DEFAULT

06 = Length 1 is 6 Characters

I 2 of 5 Set Length 2

This feature specifies one of the barcode lengths for [I 2 of 5 Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. The length includes the barcode's check and data characters.

The length can be set from 2 to 50 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 9 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 9. I 2 of 5 Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	Ignore This Length	4 Characters	14 Characters	50 Characters
2	Pad with leading zeroes to yield two digits	00	04	14	50
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT I 2 OF 5 LENGTH 2 SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '4'	'1' and '4'	'5' AND '0'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Select I 2 of 5 Length 2 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

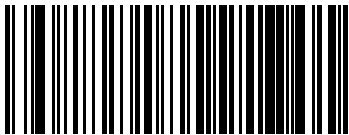

DEFAULT

50 = Length 2 is 50 Characters

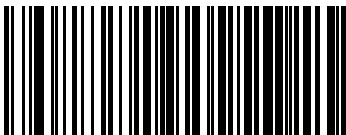

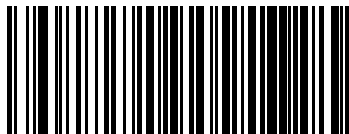

I 2 of 5 Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 I 2 of 5 Character Correlation = Disable
 I 2 of 5 Character Correlation = Enable	

I 2 of 5 Stitching

This option enables/disables stitching for I 2 of 5 labels. When parts of a I 2 of 5 barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader's software, and the data will be decoded if all barcode proofing requirements are met.

	 I 2 of 5 Stitching = Disable
 I 2 of 5 Stitching = Enable	

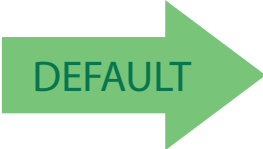

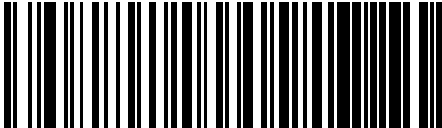

FOLLETT 2 OF 5

The following options apply to the Follett 2 of 5 symbology.

Follett 2 of 5 Enable/Disable

Enables/Disables ability of imager to decode Follett 2 of 5 labels.

	 Follett 2 of 5 = Disable
 Follett 2 of 5 = Enable	

INTERLEAVED 2 OF 5 CIP HR

The following options apply to the Interleaved 2 of 5 CIP HR symbology.

Interleaved 2 of 5 CIP HR Enable/Disable

Enables/Disables ability of reader to decode Interleaved 2 of 5 CIP HR labels.

	 Interleaved 2 of 5 CIP HR = Disable
 Interleaved 2 of 5 CIP HR = Enable	

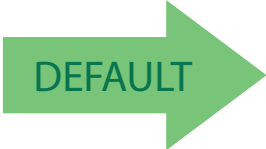

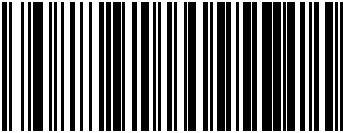

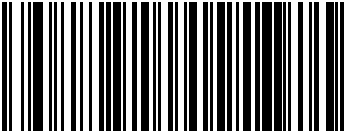

STANDARD 2 OF 5

The following options apply to the Standard 2 of 5 symbology.

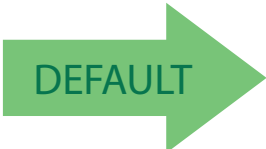

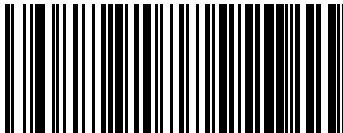

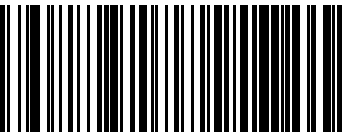

Standard 2 of 5 Enable/Disable

When disabled, the reader will not read Standard 2 of 5 barcodes.

	 Standard 2 of 5 = Disable
 Standard 2 of 5 = Enable	

Standard 2 of 5 Check Character Calculation

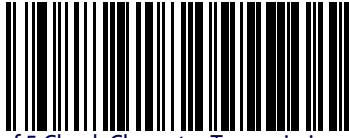

This option enables/disables calculation and verification of an optional Standard 2 of 5 check character.

	 Standard 2 of 5 Check Character Calculation = Disable
 Standard 2 of 5 Check Character Calculation = Enable	

Standard 2 of 5 Check Character Transmission

This feature enables/disables transmission of an optional Standard 2 of 5 check character.

	 Standard 2 of 5 Check Character Transmission = Don't Send
 Standard 2 of 5 Check Character Transmission = Send	

Standard 2 of 5 Minimum Reads

This feature specifies the minimum number of consecutive times a Standard 2 of 5 label must be decoded before it is accepted as good read.

	 Standard 2 of 5 Minimum Reads = 1
 Standard 2 of 5 Minimum Reads = 2	
	 Standard 2 of 5 Minimum Reads = 3
 Standard 2 of 5 Minimum Reads = 4	

Standard 2 of 5 Decoding Level

The Standard 2 of 5 Decoding Level feature is set using "2 of 5 Decoding Level" on page 142.

Standard 2 of 5 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Standard 2 of 5 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Standard 2 of 5 Length Control = Variable Length
 Standard 2 of 5 Length Control = Fixed Length	

Standard 2 of 5 Set Length 1

This feature specifies one of the barcode lengths for [Standard 2 of 5 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check and data characters. The length can be set from 1 to 50 characters.

Table 10 provides some examples for setting Length 1. See [page 242](#) if you want detailed instructions on setting this feature.

Table 10. Standard 2 of 5 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Character	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT STANDARD 2 OF 5 LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE

5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Standard 2 of 5 Length 2 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

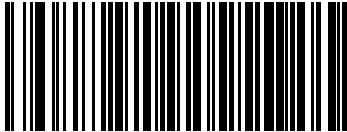

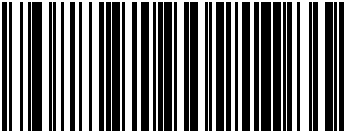

Standard 2 of 5 Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 Standard 2 of 5 Character Correlation = Disable
 Standard 2 of 5 Character Correlation = Enable	

Standard 2 of 5 Stitching

This option enables/disables stitching for Standard 2 of 5 labels. When parts of a Standard 2 of 5 barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader’s software, and the data will be decoded if all barcode proofing requirements are met.

	 Standard 2 of 5 Stitching = Disable
 Standard 2 of 5 Stitching = Enable	

INDUSTRIAL 2 OF 5

The following options apply to the Industrial 2 of 5 symbology.

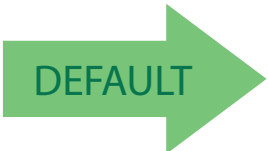

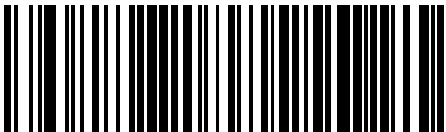

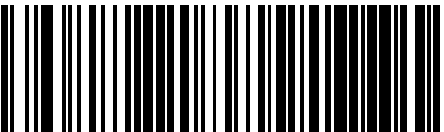

Industrial 2 of 5 Enable/Disable

Enables/Disables ability of reader to decode Industrial 2 of 5 labels.

	 Industrial 2 of 5 = Disable
 Industrial 2 of 5 = Enable	

Industrial 2 of 5 Check Character Calculation

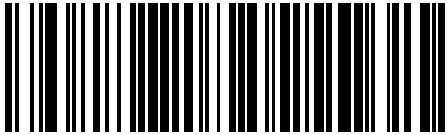

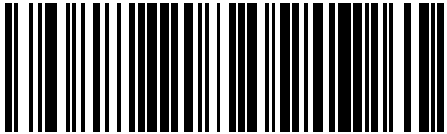

Enables/Disables calculation and verification of an optional Industrial 2 of 5 check character.

	 Industrial 2 of 5 Check Character Calculation = Disable
 Industrial 2 of 5 Check Character Calculation = Enable	

Industrial 2 of 5 Check Character Transmission

Enables/disables transmission of an Industrial 2 of 5 check character.

	 Industrial 2 of 5 Check Character Transmission = Disable
 Industrial 2 of 5 Check Character Transmission = Enable	

Industrial 2 of 5 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Industrial 2 of 5 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Industrial 2 of 5 Length Control = Variable Length
 Industrial 2 of 5 = Fixed Length	

Industrial 2 of 5 Set Length 1

This feature specifies one of the barcode lengths for [Industrial 2 of 5 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 0 to 50 characters.

Table 12 provides some examples for setting Length 1. See [page 242](#) if you want detailed instructions on setting this feature.

Table 12. Industrial 2 of 5 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT INDUSTRIAL 2 OF 5 LENGTH 1 SETTING

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

50 = Length 2 is 50 Characters

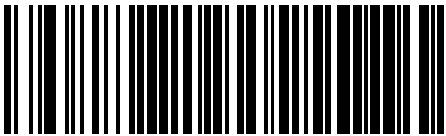

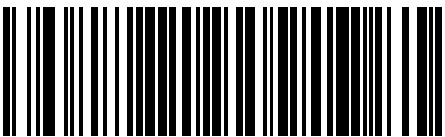

Industrial 2 of 5 Minimum Reads

This feature specifies the minimum number of consecutive times an Industrial 2 of 5 label must be decoded before it is accepted as good read.

	 Industrial 2 of 5 Minimum Reads = 1
 Industrial 2 of 5 Minimum Reads = 2	
	 Industrial 2 of 5 Minimum Reads = 3
 Industrial 2 of 5 Minimum Reads = 4	

Industrial 2 of 5 Stitching

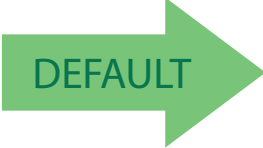

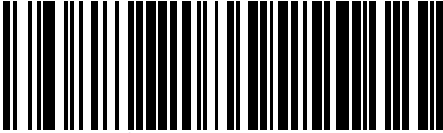

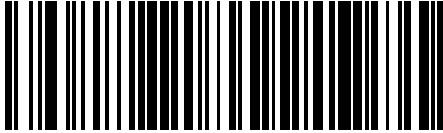

Enables/disables fixed length stitching for Industrial 2 of 5.

	 Industrial 2 of 5 Stitching = Disable
 Industrial 2 of 5 Stitching = Enable	

Industrial 2 of 5 Character Correlation

Enable/disables character correlation for Industrial 2 of 5.

	 Industrial 2 of 5 Character Correlation = Disable
 Industrial 2 of 5 Character Correlation = Enable	

CODE IATA

The following options apply to the IATA symbology.

IATA Enable/Disable

Enables/Disables the ability of the reader to decode IATA labels.

	 IATA = Disable
 IATA = Enable	

IATA Check Character Transmission

Enables/Disables calculation and verification of an optional Industrial 2 of 5 check character.

	 IATA Check Character Transmission = Disable
 IATA Check Character Transmission = Enable	

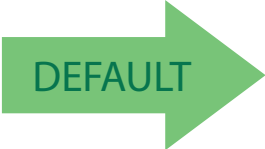

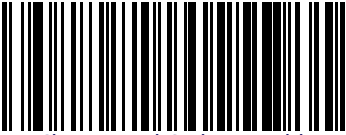

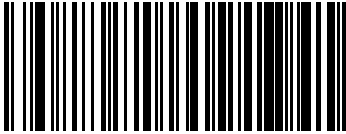

CHINA POSTAL CODE

The following options apply to the China Postal Code symbology.

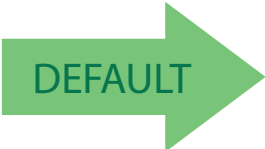

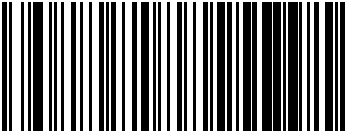

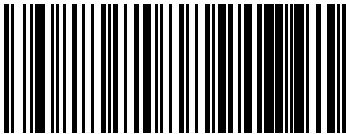

China Postal Code Enable/Disable

When disabled, the reader will not read China Postal Code barcodes.

	 China Postal Code = Disable
 China Postal Code = Enable	

China Postal Code Check Character Calculation

This option enables/disables calculation and verification of an optional China Postal Code check character.

	 China Postal Code Check Character Calculation = Disable
 China Postal Code Check Character Calculation = Enable	

China Postal Code Minimum Reads

This feature specifies the minimum number of consecutive times an China Postal Code label must be decoded before it is accepted as good read.

	<div> China Postal Code Minimum Reads = 1</div>
<div> China Postal Code Minimum Reads = 2</div>	<div></div>
	<div> China Postal Code Minimum Reads = 3</div>
<div> China Postal Code Minimum Reads = 4</div>	

China Postal Code Decoding Level

The China Postal Code Decoding Level feature is set using "2 of 5 Decoding Level" on page 142.

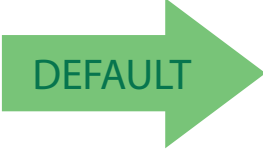

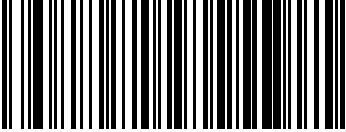

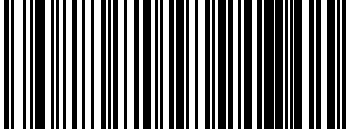

China Postal Code Length Control

This feature specifies either variable length decoding or fixed length decoding for the China Postal Code symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 China Postal Code Length Control = Variable Length
 China Postal Code Length Control = Fixed Length	

China Postal Code Set Length 1

This feature specifies one of the barcode lengths for [China Postal Code Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. The length includes the barcode’s check and data characters. The length can be set from 2 to 50 characters in increments of two.

Table 14 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 14. China Postal Code Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	2 Characters	6 Characters	14 Characters	50 Characters

50 = Length 2 is 50 Characters

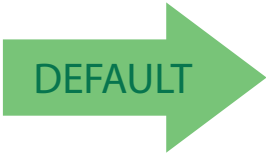

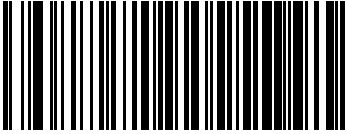

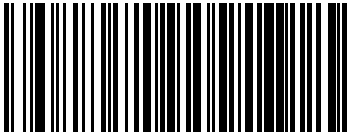

China Postal Code Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 I 2 of 5 Character Correlation = Disable
 I 2 of 5 Character Correlation = Enable	

China Postal Code Stitching

This option enables/disables stitching for China Postal Code labels. When parts of a China Postal Code barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader’s software, and the data will be decoded if all barcode proofing requirements are met.

	 China Postal Code Stitching = Disable
 China Postal Code Stitching = Enable	

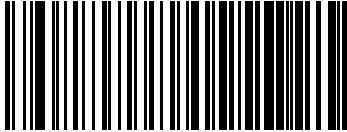

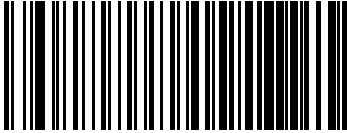

CODABAR

The following options apply to the Codabar symbology.

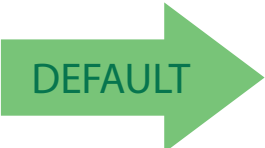

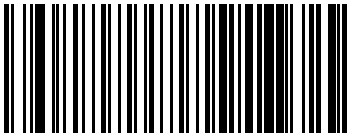

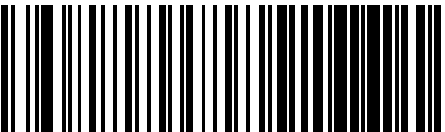

Codabar Enable/Disable

When disabled, the reader will not read Codabar barcodes.

	 Codabar = Disable
 Codabar = Enable	

Codabar Check Character Calculation

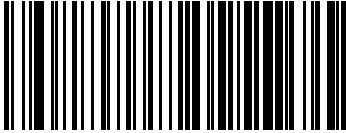

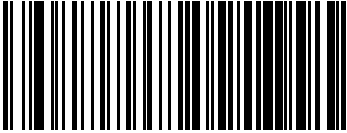

Enable this option to enables/disables calculation and verification of an optional Codabar check character. When disabled, any check character in the label is treated as a data character

	 Codabar Check Character Calculation = Don't Calculate
 Codabar Check Character Calculation = Enable AIM standard check char.	
	 Codabar Check Character Calculation = Enable Modulo 10 check char.

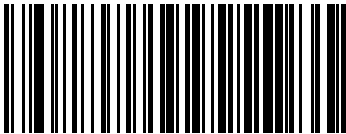

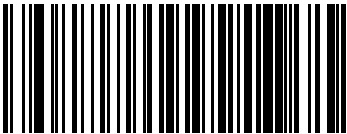

Codabar Check Character Transmission

Enable this option to transmit the check character along with Codabar barcode data.

	 Codabar Check Character Transmission = Don't Send
 Codabar Check Character Transmission = Send	

Codabar Start/Stop Character Transmission

Enable this option to enable/disable transmission of Codabar start and stop characters.

	 Codabar Start/Stop Character Transmission = Don't Transmit
 Codabar Start/Stop Character Transmission = Transmit	

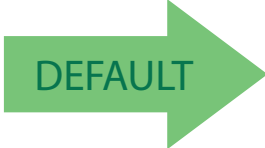

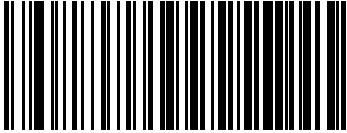

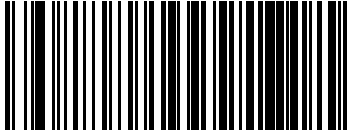

Codabar Start/Stop Character Set

This option specifies the format of transmitted Codabar start/stop characters.

	 Codabar Check Character Set = ABCD/TN*E
 Codabar Check Character Set = ABCD/ABCD	
	 Codabar Check Character Set = abcd/tn*e
 Codabar Check Character Set = abcd/abcd	

Codabar Start/Stop Character Match

When enabled, this option requires that start and stop characters match.

	 Codabar Start/Stop Character Match = Don't Require Match
 Codabar Start/Stop Character Match = Require Match	

Codabar Quiet Zones

Specifies the number of quiet zones for Codabar labels. Quiet zones are blank areas at the ends of a barcode and are typically 10 times the width of the narrowest bar or space in the label.

 Codabar Quiet Zones = Quiet Zone on one side	
	 Codabar Quiet Zones = Quiet Zones on two sides
 Codabar Quiet Zones = Auto	
	 Codabar Quiet Zones = Virtual Quiet Zones on two sides
 Codabar Quiet Zones = Small Quiet Zones on two sides	

Codabar Minimum Reads

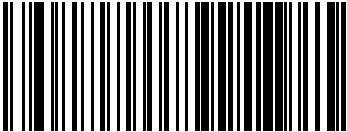

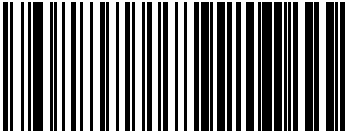

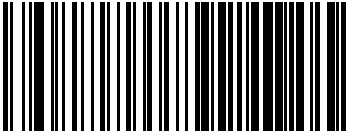

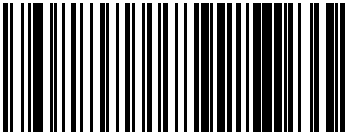

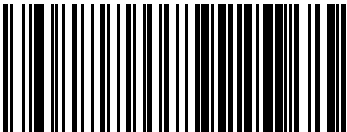

This feature specifies the minimum number of consecutive times a Codabar label must be decoded before it is accepted as good read.

	<div><div>Codabar Minimum Reads = 1</div></div>
<div><div>Codabar Minimum Reads = 2</div></div>	<div></div>
	<div><div>Codabar Minimum Reads = 3</div></div>
<div><div>Codabar Minimum Reads = 4</div></div>	

Codabar Decoding Level

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative, depending on a particular customer's needs. See [page 242](#) for more information on this feature.

 Codabar Decoding Level = 1 (Conservative)	
	 Codabar Decoding Level = 2
 Codabar Decoding Level = 3	
	 Codabar Decoding Level = 4
 Codabar Decoding Level = 5	

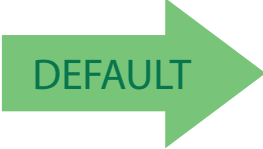

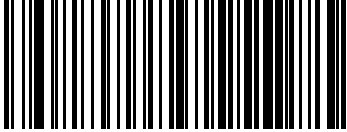

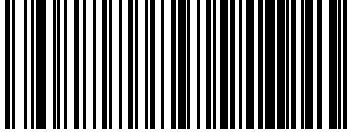

Codabar Length Control

This feature specifies either variable length decoding or fixed length decoding for the Codabar symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Codabar Length Control = Variable Length
 Codabar Length Control = Fixed Length	

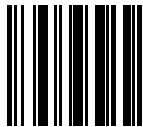

Codabar Set Length 1

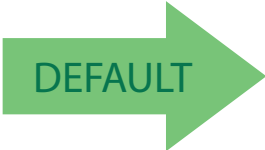

This feature specifies one of the barcode lengths for [Codabar Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s start, stop, check and data characters. The length must include at least one data character. The length can be set from 3 to 50 characters.

Table 16 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 16. Codabar Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting (and pad with leading zeroes)	03 Characters	09 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODABAR LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '3'	'0' and '9'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Codabar Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

03 = Length 1 is 3 Characters

Codabar Set Length 2

This feature specifies one of the barcode lengths for [Codabar Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. The length includes the barcode’s start, stop, check and data characters. The length must include at least one data character.

The length can be set from 3 to 50 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 17 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 17. Codabar Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting (and pad with leading zeroes)	00 Ignore This Length	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODABAR LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

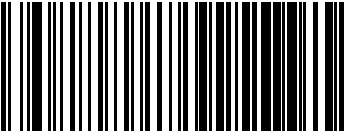

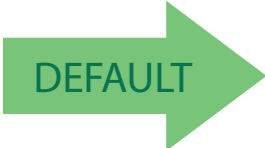

50 = Length 2 is 50 Characters

Codabar Interdigit Ratio

This feature specifies the ratio between an intercharacter space and module for Codabar labels.

	 Codabar Interdigit Ratio = Disable
 Codabar Interdigit Ratio = 1	
	 Codabar Interdigit Ratio = 2
 Codabar Interdigit Ratio = 3	
	 Codabar Interdigit Ratio = 4
 Codabar Interdigit Ratio = 5	

ENTER/EXIT PROGRAMMING MODE

Codabar Interdigit Ratio

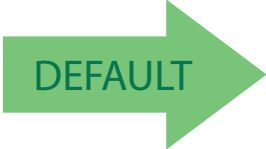

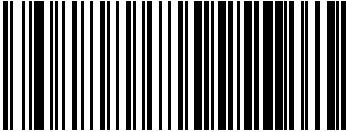

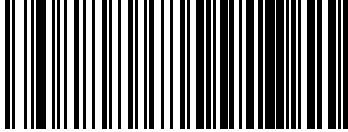

Codabar Interdigit Ratio (continued)

	 Codabar Interdigit Ratio = 6
 Codabar Interdigit Ratio = 7	
	 Codabar Interdigit Ratio = 8
 Codabar Interdigit Ratio = 9	
	 Codabar Interdigit Ratio = 10

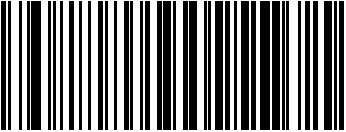

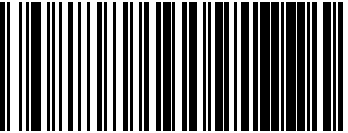

Codabar Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 Codabar Character Correlation = Disable
 Codabar Character Correlation = Enable	

Codabar Stitching

This option enables/disables stitching for Codabar labels. When parts of a Codabar barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader’s software, and the data will be decoded if all barcode proofing requirements are met.

	 Codabar Stitching = Disable
 Codabar Stitching = Enable	

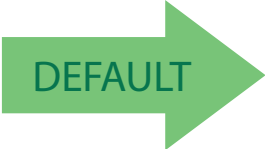

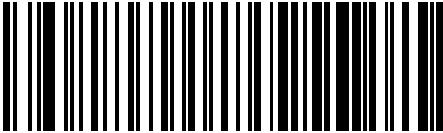

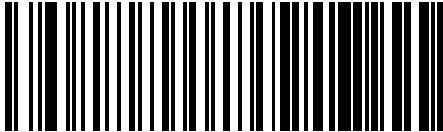

ABC CODABAR

The following options apply to the ABC Codabar symbology.

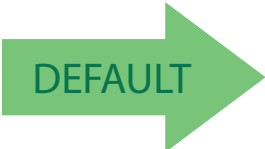

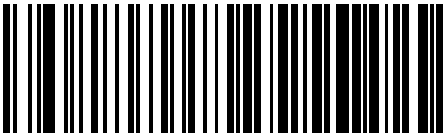

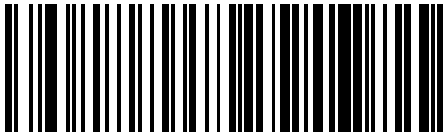

ABC Codabar Enable/Disable

Enables/Disables ability of reader to decode ABC Codabar labels.

	 ABC Codabar = Disable
 ABC Codabar = Enable	

ABC Codabar Concatenation Mode

Specifies the concatenation mode between Static and Dynamic.

	 ABC Codabar Concatenation Mode = Static
 ABC Codabar Concatenation Mode = Dynamic	

ABC Codabar Dynamic Concatenation Timeout

Specifies the timeout in 10-millisecond ticks used by the ABC Codabar Dynamic Concatenation Mode.

	<div><p>ABC Codabar Dynamic Concatenation Timeout = 50 msec</p></div>
<div><p>ABC Codabar Dynamic Concatenation Timeout = 100 msec</p></div>	
<div></div>	<div><p>ABC Codabar Dynamic Concatenation Timeout = 200 msec</p></div>
<div><p>ABC Codabar Dynamic Concatenation Timeout = 500 msec</p></div>	
	<div><p>ABC Codabar Dynamic Concatenation Timeout = 750 msec</p></div>
<div><p>ABC Codabar Dynamic Concatenation Timeout = 1 Second</p></div>	

ABC Codabar Force Concatenation

Forces labels starting or ending with D to be concatenated.

	 ABC Codabar Force Concatenation = Disable
 ABC Codabar Force Concatenation = Enable	

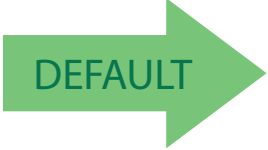

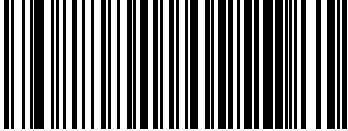

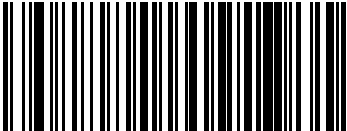

CODE 11

The following options apply to the Code 11 symbology.

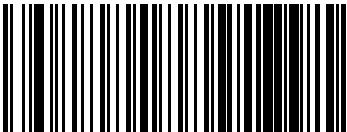

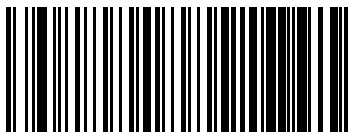

Code 11 Enable/Disable

When disabled, the reader will not read Code 11 barcodes.

	 Code 11 = Disable
 Code 11 = Enable	

Code 11 Check Character Calculation

This option enables/disables calculation and verification of optional Code 11 check character.

	 Code 11 Check Character Calculation = Disable
 Code 11 Check Character Calculation = Check C	
	 Code 11 Check Character Calculation = Check K
 Code 11 Check Character Calculation = Check C and K	

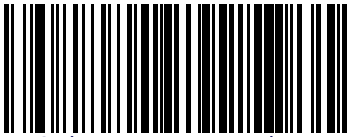

Code 11 Check Character Transmission

This feature enables/disables transmission of an optional Code 11 check character.

	 Code 11 Check Character Transmission = Don't Send
 Code 11 Check Character Transmission = Send	

Code 11 Minimum Reads

This feature specifies the minimum number of consecutive times a Code 11 label must be decoded before it is accepted as good read.

	 Code 11 Minimum Reads = 1
 Code 11 Minimum Reads = 2	
	 Code 11 Minimum Reads = 3
 Code 11 Minimum Reads = 4	

Code 11 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Code 11 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Code 11 Length Control = Variable Length
 Code 11 Length Control = Fixed Length	

Code 11 Set Length 1

This feature specifies one of the barcode lengths for [Code 11 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check and data characters. The length can be set from 2 to 50 characters.

Table 18 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 18. Code 11 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting (pad with leading zeroes)	02 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 11 LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '2'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Select Code 11 Set Length 1 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

04 = Length 1 is 4 Characters

Code 11 Set Length 2

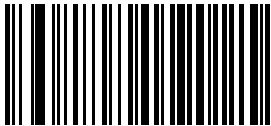

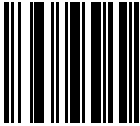

This feature specifies one of the barcode lengths for [Code 11 Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check and data characters.

The length can be set from 2 to 50 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 19 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 19. Code 11 Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting (pad with leading zeroes)	00 (Ignore This Length)	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 11 LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'0' and 'F'	'3' AND 2'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Code 11 Length 2 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

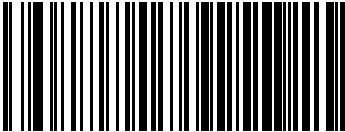

50 = Length 2 is 50 Characters

Code 11 Interdigit Ratio

This feature specifies the ratio between an intercharacter space and module for Code 11 labels.

	 Code 11 Interdigit Ratio = Disable
 Code 11 Interdigit Ratio = 1	
	 Code 11 Interdigit Ratio = 2
 Code11 Interdigit Ratio = 3	
	 Code 11 Interdigit Ratio = 4
 Code 11 Interdigit Ratio = 5	

Code 11

ENTER/EXIT PROGRAMMING MODE

Code 11 Interdigit Ratio (continued)

	 Code 11 Interdigit Ratio = 6
 Code 11 Interdigit Ratio = 7	
	 Code 11 Interdigit Ratio = 8
 Code 11 Interdigit Ratio = 9	
	 Code 11 Interdigit Ratio = 10

Code 11 Decoding Level

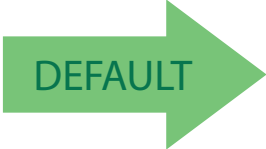

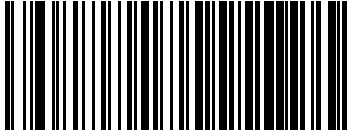

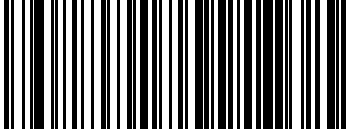

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer’s needs. See [page 242](#) for more information on this feature.

 Codabar Decoding Level = 1 (Conservative)	
	 Codabar Decoding Level = 2
 Codabar Decoding Level = 3	
	 Codabar Decoding Level = 4
 Codabar Decoding Level = 5 (Aggressive)	

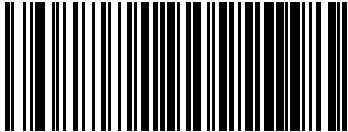

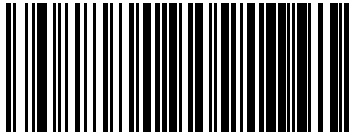

Code 11 Character Correlation

When correlation is enabled, the barcode reader will combine label data from multiple scans when decoding. Enabling correlation will help the scanner read labels that have some spots and/or voids. It may also help read labels that have damaged areas. Enabling correlation will also increase the chances that a label will be read incorrectly.

	 Code 11 Character Correlation = Disable
 Code 11 Character Correlation = Enable	

Code 11 Stitching

This option enables/disables stitching for Code 11 labels. When parts of a Code 11 barcode are presented to the reader with this feature enabled, the barcode parts will be assembled by the reader's software, and the data will be decoded if all barcode proofing requirements are met.

	 Code 11 Stitching = Disable
 Code 11 Stitching = Enable	

GS1 DATABAR™ OMNIDIRECTIONAL

The following options apply to the GS1 DataBar™ Omnidirectional (formerly RSS-14) symbology.

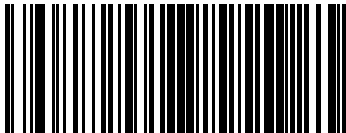

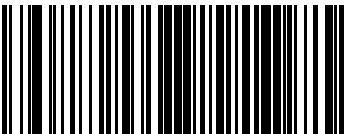

GS1 DataBar™ Omnidirectional Enable/Disable

When disabled, the reader will not read GS1 DataBar™ Omnidirectional barcodes.

	 GS1 DataBar™ Omnidirectional = Disable
 GS1 DataBar™ Omnidirectional = Enable	

GS1 DataBar™ Omnidirectional GS1-128 Emulation

When enabled, GS1 DataBar™ Omnidirectional barcodes will be translated to the GS1-128 label data format.

	 GS1 DataBar™ Omnidirectional GS1-128 Emulation = Disable
 GS1 DataBar™ Omnidirectional GS1-128 Emulation = Enable	

GS1 DataBar™ Omnidirectional Minimum Reads

This feature specifies the minimum number of consecutive times a GS1 DataBar™ Omnidirectional label must be decoded before it is accepted as good read.

	 GS1 DataBar™ Omnidirectional Minimum Reads = 1
 GS1 DataBar™ Omnidirectional Minimum Reads = 2	
	 GS1 DataBar™ Omnidirectional Minimum Reads = 3
 GS1 DataBar™ Omnidirectional Minimum Reads = 4	

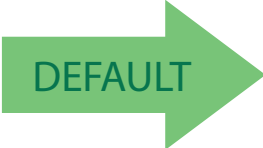

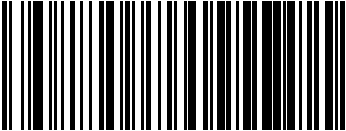

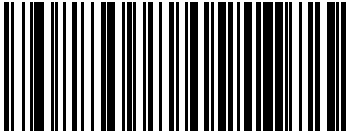

GS1 DATABAR™ EXPANDED

The following options apply to the GS1 DataBar™ Expanded (formerly RSS Expanded) symbology.

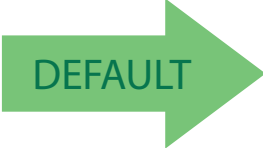

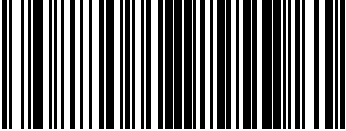

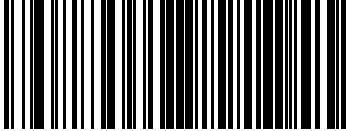

GS1 DataBar™ Expanded Enable/Disable

When disabled, the reader will not read GS1 DataBar™ Expanded barcodes.

	 GS1 DataBar™ Expanded = Disable
 GS1 DataBar™ Expanded = Enable	

GS1 DataBar™ Expanded GS1-128 Emulation

When enabled, GS1 DataBar™ Expanded barcodes will be translated to the GS1-128 label data format.

	 GS1 DataBar™ Expanded GS1-128 Emulation = Disable
 GS1 DataBar™ Expanded GS1-128 Emulation = Enable	

GS1 DataBar™ Expanded Minimum Reads

This feature specifies the minimum number of consecutive times a GS1 DataBar™ Expanded label must be decoded before it is accepted as good read.

	 GS1 DataBar™ Expanded Minimum Reads = 1
 GS1 DataBar™ Expanded Minimum Reads = 2	
	 GS1 DataBar™ Expanded Minimum Reads = 3
 GS1 DataBar™ Expanded Minimum Reads = 4	

GS1 DataBar™ Expanded Length Control

This feature specifies either variable length decoding or fixed length decoding for the GS1 DataBar™ Expanded symbology.

Variable Length. For variable-length decoding, a minimum length may be set.

Fixed Length. For fixed-length decoding, two different lengths may be set.

	 GS1 DataBar™ Expanded Length Control = Variable Length
 GS1 DataBar™ Expanded Length Control = Fixed Length	

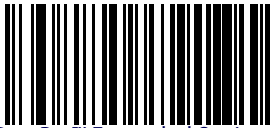

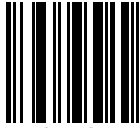

GS1 DataBar™ Expanded Set Length 1

This feature specifies one of the barcode lengths for GS1 DataBar™ Expanded Length Control. Length 1 is the minimum label length if in Variable Length Mode, or the first fixed length if in Fixed Length Mode. Length includes the barcode’s data characters only. The length can be set from 1 to 74 characters.

Table 20 provides some examples for setting Length 1. See page 242 for detailed instructions on setting this feature.

Table 20. GS1 DataBar™ Expanded Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Character	07 Characters	52 Characters	74 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT GS1 DataBar™ EXPANDED LENGTH 1SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '7'	'5' and '2'	'7' AND '4'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select GS1 DataBar™ Expanded Set Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

01 = Length 1 is 1 Character

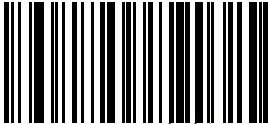

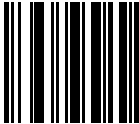

GS1 DataBar™ Expanded Set Length 2

This feature specifies one of the barcode lengths for [GS1 DataBar™ Expanded Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 1 to 74 characters. A setting of 0 specifies to ignore this length (only one fixed length). Table 21 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 21. GS1 DataBar™ Expanded Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 (ignore second length)	07 Characters	52 Characters	74 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT GS1 DataBar™ EXPANDED LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'5' and '2'	'7' and '4'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select GS1 DataBar™ Expanded Set Length 2 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

74 = Length 2 is 74 Characters

GS1 DATABAR™ LIMITED

The following options apply to the GS1 DataBar™ Limited (formerly RSS Limited) symbology.

GS1 DataBar™ Limited Enable/Disable

When disabled, the reader will not read GS1 DataBar™ Limited barcodes.

	 GS1 DataBar™ Limited = Disable
 GS1 DataBar™ Limited = Enable	

GS1 DataBar™ Limited GS1-128 Emulation

When enabled, GS1 DataBar™ Limited barcodes will be translated to the GS1-128 label data format.

	 GS1 DataBar™ Limited GS1-128 Emulation = Disable
 GS1 DataBar™ Limited GS1-128 Emulation = Enable	

GS1 DataBar™ Limited Minimum Reads

This feature specifies the minimum number of consecutive times a GS1 DataBar™ Limited label must be decoded before it is accepted as good read.

	 GS1 DataBar™ Limited Minimum Reads = 1
 GS1 DataBar™ Limited Minimum Reads = 2	
	 GS1 DataBar™ Limited Minimum Reads = 3
 GS1 DataBar™ Limited Minimum Reads = 4	

CODE 93

The following options apply to the Code 93 symbology.

Code 93 Enable/Disable

Enables/Disables ability of reader to decode Code 93 labels.

	 Code 93 = Disable
 Code 93 = Enable	

Code 93 Check Character Calculation

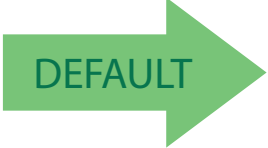

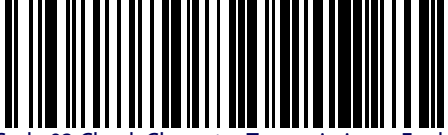

Enables/disables calculation and verification of an optional Code 93 check character.

	 Code 93 Check Character Calculation = Disable
 Code 93 Check Character Calculation = Enable Check C	
	 Code 93 Check Character Calculation = Enable Check K
 Code 93 Check Character Calculation = Enable Check C and K	

Code 93 Check Character Transmission

Enables/disables transmission of an optional Code 93 check character.

	 Code 93 Check Character Transmission = Disable
 Code 93 Check Character Transmission = Enable	

Code 93 Length Control

This feature specifies either variable length decoding or fixed length decoding for the Code 93 symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Code 93 Length Control = Variable Length
 Code 93 = Fixed Length	

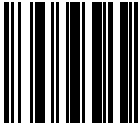

Code 93 Set Length 1

Specifies one of the barcode lengths for [Code 93 Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 01 to 50 characters.

Table 22 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 22. Code 93 Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT CODE 93 LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Code 93 Set Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

01 = Length 1 is 1 Character

Code 93 Set Length 2

This feature specifies one of the barcode lengths for [Code 93 Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode's check, data, and full-ASCII shift characters. The length does not include start/stop characters. The length can be set from 1 to 50 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 23 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 23. CODE 93 Length 2 Setting Examples

STEP	ACTION	EXAMPLES

Select Code 93 Length 2 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

DEFAULT

50 = Length 2 is 50 Characters

Code 93 Minimum Reads

This feature specifies the minimum number of consecutive times a Code 93 label must be decoded before it is accepted as good read.

	 Code 93 Minimum Reads = 1
 Code 93 Minimum Reads = 2	
	 Code 93 Minimum Reads = 3
 Code 93 Minimum Reads = 4	

Code 93 Decoding Level

Specifies the decoding level for Code 93. Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer's needs. See [page 242](#) for more information on this feature.

	 Code 93 Decoding Level = Disable
 Code 93 Decoding Level = 1 (Conservative)	
	 Code 93 Decoding Level = 2
 Code 93 Decoding Level = 3	
	 Code 93 Decoding Level = 4
 Code 93 Decoding Level = 5 (Aggressive)	

Code 93 Quiet Zones

Enables/disables quiet zones for Code 93.

	<div><p>Code 93 Quiet Zones = No Quiet Zones</p></div>
<div><p>Code 93 Quiet Zones = Quiet Zone on one side</p></div>	
	<div><p>Code 93 Quiet Zones = Quiet Zones on two sides</p></div>
<div><p>Code 93 Quiet Zones = Auto</p></div>	<div></div>
	<div><p>Code 93 Quiet Zones = Virtual Quiet Zones on two sides</p></div>

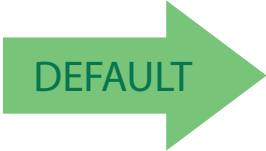

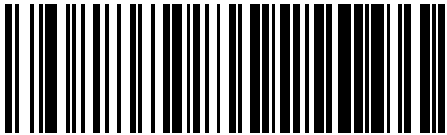

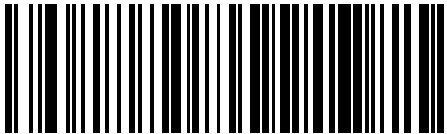

Code 93 Stitching

Disable/enable fixed or variable length stitching for Code 93.

	 Code 93 Stitching = Disable
 Code 93 Stitching = Enable	

Code 93 Character Correlation

Enables/disables Character Correlation for Code 93.

	 Code 93 Character Correlation = Disable
 Code 93 Character Correlation = Enable	

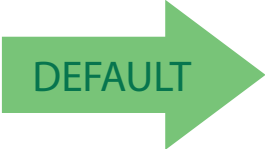

MSI

The following options apply to the MSI symbology.

MSI Enable/Disable

Enables/Disables ability of reader to decode MSI labels.

	 MSI = Disable
 MSI = Enable	

MSI Check Character Calculation

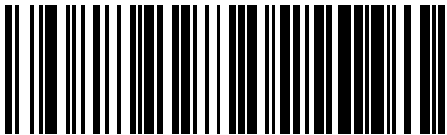

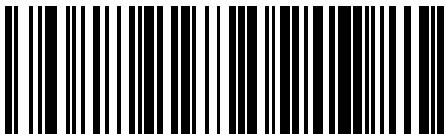

Enables/Disables calculation and verification of an optional MSI check character.

	 MSI Check Character Calculation = Disable
 MSI Check Character Calculation = Enable Mod10	
	 MSI Check Character Calculation = Enable Mod11/10
 MSI Check Character Calculation = Enable Mod10/10	

MSI Check Character Transmission

Enables/disables transmission of an MSI check character.

	 MSI Check Character Transmission = Disable
 MSI Check Character Transmission = Enable	

MSI Length Control

This feature specifies either variable length decoding or fixed length decoding for the MSI symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 MSI Length Control = Variable Length
 MSI = Fixed Length	

MSI Set Length 1

This feature specifies one of the barcode lengths for MSI Length Control. Length 1 is the minimum label length if in Variable Length Mode, or the first fixed length if in Fixed Length Mode. Length includes the barcode’s data characters only. The length can be set from 01 to 50 characters.

Table 24 provides some examples for setting Length 1. See page 242 for detailed instructions on setting this feature.

Table 24. MSI Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT MSI LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE

PLESSEY

The following options apply to the Plessey symbology.

Plessey Enable/Disable

Enables/Disables ability of reader to decode Plessey labels.

	 Plessey = Disable
 Plessey = Enable	

Plessey Check Character Calculation

Enables/Disables calculation and verification of an optional Plessey check character.

	 Plessey Check Character Calculation = Disable
 Plessey Check Character Calculation = Enable Plessey std. check char. verification	← DEFAULT
	 Plessey Check Character Calculation = Enable Anker check char. verification
 Plessey Check Character Calculation = Enable Plessey std. and Anker check char verification	

Plessey Check Character Transmission

Enables/disables transmission of an MSI check character.

	 Plessey Check Character Transmission = Disable
 Plessey Check Character Transmission = Enable	← DEFAULT

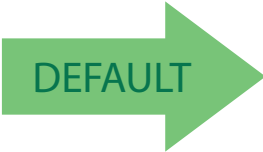

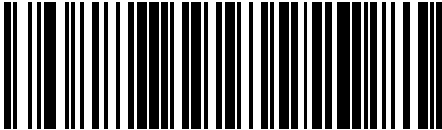

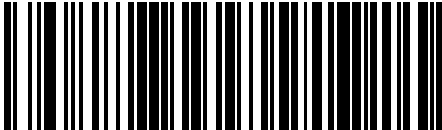

Plessey Length Control

This feature specifies either variable length decoding or fixed length decoding for the Plessey symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

	 Plessey Length Control = Variable Length
 Plessey = Fixed Length	

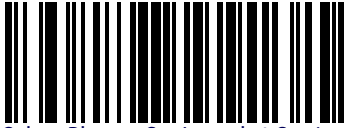

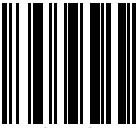

Plessey Set Length 1

This feature specifies one of the barcode lengths for [Plessey Length Control](#). Length 1 is the minimum label length if in [Variable Length](#) Mode, or the first fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s data characters only. The length can be set from 01 to 50 characters.

Table 26 provides some examples for setting Length 1. See [page 242](#) for detailed instructions on setting this feature.

Table 26. Plessey Length 1 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	01 Characters	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT Plessey LENGTH 1 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

 Select Plessey Set Length 1 Setting	
Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	 CANCEL

01 = Length 1 is 1 Character

Plessey Set Length 2

This feature specifies one of the barcode lengths for [Plessey Length Control](#). Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. Length includes the barcode’s check, data, and full-ASCII shift characters. The length does not include start/stop characters.

The length can be set from 1 to 50 characters. A setting of 0 specifies to ignore this length (only one fixed length).

Table 27 provides examples for setting Length 2. See [page 243](#) for detailed instructions on setting this feature.

Table 27. Plessey Length 2 Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	00 (Ignore This Length)	07 Characters	15 Characters	50 Characters
2	Scan ENTER/EXIT PROGRAMMING MODE				
3	Scan SELECT PLESSEY LENGTH 2 SETTING				
4	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '7'	'1' and '5'	'5' AND '0'
5	Scan ENTER/EXIT PROGRAMMING MODE				

Select Plessey Length 2 Setting

Make a mistake? Scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

CANCEL

50 = Length 2 is 50 Characters

Plessey Minimum Reads

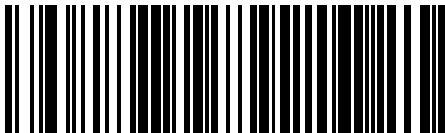

This feature specifies the minimum number of consecutive times a Plessey label must be decoded before it is accepted as good read.

	<div><p>Plessey Minimum Reads = 1</p></div>
<div><p>Plessey Minimum Reads = 2</p></div>	
	<div><p>Plessey Minimum Reads = 3</p></div>
<div><p>Plessey Minimum Reads = 4</p></div>	<div></div>

Plessey Decoding Level

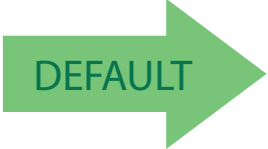

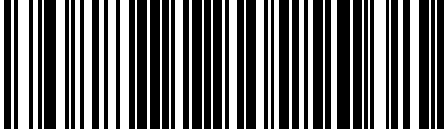

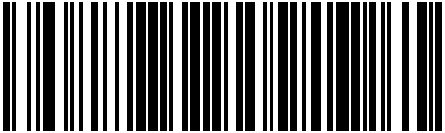

Specifies the decoding level for Plessey. Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer’s needs. See [page 242](#) for more information on this feature.

	 Plessey Decoding Level = Disable
 Plessey Decoding Level = 1 (conservative)	
	 Plessey Decoding Level = 2
 Plessey Decoding Level = 3	
	 Plessey Decoding Level = 4
 Plessey Decoding Level = 5 (aggressive)	

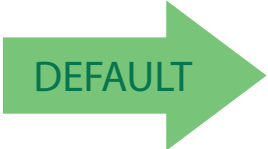

Plessey Stitching

Enables/disables fixed length stitching for Plessey.

	 Plessey Stitching = Disable
 Plessey Stitching = Enable	

Plessey Character Correlation

Enables/disables Character Correlation for Plessey.

	 Plessey Character Correlation = Disable
 Plessey Character Correlation = Enable	

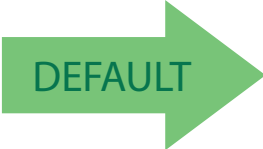

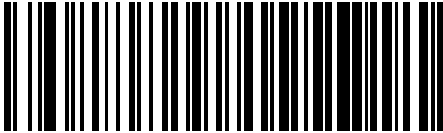

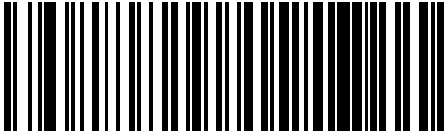

CODE 4

The following options apply to the Code 4 symbology.

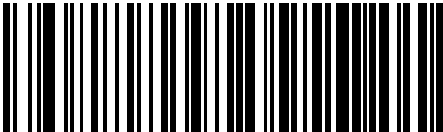

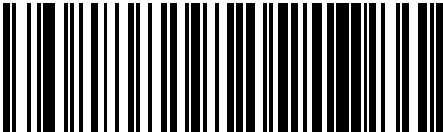

Code 4 Enable/Disable

Enables/Disables ability of imager to decode Code 4 labels.

	 Code 4 = Disable
 Code 4 = Enable	

Code 4 Check Character Transmission

This feature enables/disables transmission of an optional Code 4 check character.

	 Code 4 Check Character Transmission = Don't Send
 Code 4 Check Character Transmission = Send	

Code 5

ENTER/EXIT PROGRAMMING MODE

Code 4 Hex to Decimal Conversion

This feature enables/disables the conversion of hexadecimal label data to decimal label data.

	 Code 4 Hex to Decimal Conversion = Disable
 Code 4 Hex to Decimal Conversion = Enable	

CODE 5

The following options apply to the Code 5 symbology.

Code 5 Enable/Disable

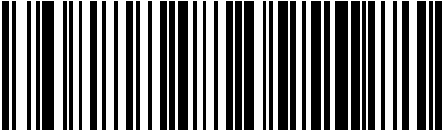

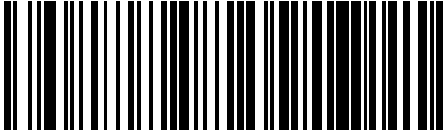

Enables/Disables ability of imager to decode Code 5 labels.

	 Code 5 = Disable
 Code 5 = Enable	

Code 5 Check Character Transmission

This feature enables/disables transmission of an optional Code 5 check character.

	 Code 5 Check Character Transmission = Don't Send
 Code 5 Check Character Transmission = Send	

Code 5 Hex to Decimal Conversion

This feature enables/disables the conversion of hexadecimal label data to decimal label data.

	 Code 5 Hex to Decimal Conversion = Disable
 Code 5 Hex to Decimal Conversion = Enable	

CODE 4 AND CODE 5 COMMON CONFIGURATION ITEMS

The following options apply to both Code 4 and Code 5 symbologies.

Code 4 and 5 Decoding Level

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer’s needs. See [page 231](#) for more information on this feature.

This configuration item applies to Code 4 and Code 5.

 Code 4 and Code 5 Decoding Level = 1 (conservative)	
	 Code 4 and Code 5 Decoding Level = 2
 Code 4 and Code 5 Decoding Level = 3	
	 Code 4 and Code 5 Decoding Level = 4
 Code 4 and Code 5 Decoding Level = 5 (aggressive)	

Code 4 and Code 5 Minimum Reads

This feature specifies the minimum number of consecutive times a Code 4 or Code 5 label must be decoded before it is accepted as good read.

	 Code 4 or Code 5 Minimum Reads = 1
 Code 4 or Code 5 Minimum Reads = 2	
	 Code 4 or Code 5 Minimum Reads = 3
 Code 4 or Code 5 Minimum Reads = 4	

NOTES

LASER FEATURES

LASER SCAN ANGLE on page 228
LASER IDLE MODE on page 228
BI-DIRECTIONAL READ DECODING on page 229
ALWAYS ON SCAN MODE TIMEOUT on page 230

This section provides options and programming related to the reader's laser features.
Reference [Appendix B, Standard Defaults](#) for a listing of standard factory settings.

For hands-free or stand operations, it is recommended that *Flashing* scan mode be used. See "Scan Mode" [on page 73](#) for programming labels for this feature. For more information, go to [page 254](#) in "References".

ENTER/EXIT PROGRAMMING MODE

Laser Scan Angle

This feature sets the scan angle for the laser. The Narrow scan angle is helpful for selecting and reading a specific barcode among a tight grouping of labels.

	 Laser Scan Angle = Normal (47 degrees)
 Laser Scan Angle = Narrow (35 degrees)	

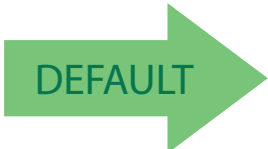

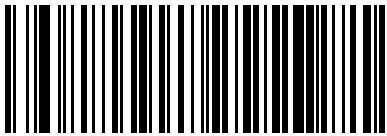

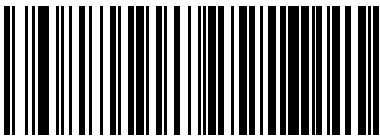

Laser Idle Mode

Laser Idle Mode option is applicable for; trigger Single, Trigger Hold Multiple & Trigger Pulse Multiple only.

This configuration provides control over the laser scanning motor when the laser is not actively scanning. The options are:

Dither Disable . Shuts down the motor (laser mirror dithering) during laser engine idle time to reduce overall scanner power consumption.

Dither Enable. Allows the laser engine motor to continue dithering when laser is not active; may provide an improved read response time.

	 Dither Disable
 Dither Enable	

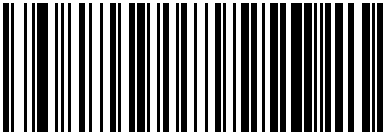

Bi-Directional Read Decoding

This configuration provides control over the good read and barcode label requirement. This programming option for Gyphon Laser affects all barcode symbologies.

Bi-Directional Read Disable. When Bi-directional reading is disabled, the laser scan is only required to obtain a valid label read in one scanning direction.

Bi-Directional Read Enable. When enabled, the reader is must obtain a valid good read in both scanning directions as part of the label read/decode process. Enabled will provides increased decode reliability.

	 Bi-Directional Read Disable
 Bi-Directional Read Enable	

ENTER/EXIT PROGRAMMING MODE

Always On Scan Mode Timeout

When the WLS9600 is in Always On scanning mode, timeout periods can be configured. If the programmed Always On Timeout elapses, the reader will shut down and a trigger pull is required to resume operation.

	 Always On Timeout: 1 Hour
 Always On Timeout: 2 Hours	
	 Always On Timeout: 3 Hours
 Always On Timeout: 4 Hours	
 DEFAULT	 Always On Timeout: 5 Hours

Chapter 5

References

This section contains explanations and examples of selected barcode features. See the Configuration section for the actual barcode labels used to configure the reader.

RS-232 Parameters

RS-232 Only

Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the reader's baud rate to match the baud rate setting of the host device. With an improper baud rate setting, data may not reach the host correctly.

Stop Bits

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. The number of stop bits selected (one or two) depends on the number the receiving terminal is programmed to accommodate. Set the number of stop bits to match host device requirements.

Parity

This feature specifies parity required for sending and receiving data. A parity check bit is the most significant bit of each ASCII coded character. Select the parity type according to host device requirements.

- Select None when no parity bit is required.
- Select Odd parity and the parity bit value is set to 0 or 1, based on data, to ensure that an odd number of 1 bits are contained in the coded character.
- Select Even parity and the parity bit value is set to 0 or 1, based on data, to ensure that an even number of 1 bits are contained in the coded character.

Handshaking Control

The data interface consists of an RS-232 port designed to operate either with or without the hardware handshaking lines, *Request to Send* (RTS), and *Clear to Send* (CTS). Handshaking Control includes the following options:

- RTS — RTS is asserted during transmissions. CTS is ignored.
- RTS/CTS — RTS is asserted during transmissions. CTS gates transmissions.

- RTS/XON/XOFF — RTS is asserted during transmissions. CTS is ignored. XON and XOFF gate transmissions.
- RTS On/CTS — RTS is always asserted. CTS gates transmissions.

RTS/CTS Scan Control — RTS is asserted during transmissions. CTS gates transmissions and controls enable and disable state of scanner.

RS-232/USB COM Parameters

Intercharacter Delay

This parameter specifies the intercharacter delay between the end of one character and the beginning of the next. The delay can be set within a range of zero (0) to 990 milliseconds in 10ms increments. A setting of zero specifies no delay.

To set the delay:

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 10 (setting is in 10ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Go to [page 25](#) and scan the barcode: SELECT INTERCHARACTER DELAY SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit.

This completes the procedure. See [Table 28](#) for some examples of how to set this feature.

Table 28. Intercharacter Delay Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	50ms	150ms	600ms	850ms
2	Divide by 10 (pad with leading zeroes to yield two-digits)	05	15	60	85
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT INTERCHARACTER DELAY SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '5'	'5' and '0'	'6' and '0'	'8' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

ACK NAK Options

This enables/disables the ability of the reader to support the RS-232 ACK/NAK protocol. When configured, the reader and/or host sends an “ACK” when it receives data properly, and sends “NAK” when the data is in error.

Options are:

- Disable
- Enable for label transmission — The reader expects an ACK/NAK response from the host when a label is sent.
- Enable for host-command acknowledge — The reader will respond with ACK/NAK when the host sends a command.
- Enable for label transmission and host-command acknowledge

ACK Character

This setting specifies an ASCII character or hex value to be used as the ACK character. ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

1. Determine the desired character or value.
2. Use the [ASCII Chart](#) on the inside back cover of this manual to find the hex equivalent for the desired character/value.
3. Go to [page 28](#) and scan ENTER/EXIT PROGRAMMING MODE to enter Programming Mode.
4. Scan the barcode: SELECT ACK CHARACTER SETTING.
5. Scan the appropriate two alpha-numeric characters from the keypad in [Appendix D, Keypad](#), that represent the desired character/value in step 1 above. The second character will cause a two-beep indication.
6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit.

See [Table 29](#) for some examples of how to set this feature.

Table 29. ACK Character Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Character/Value	ACK	\$	@	>
2	Hex equivalent from ASCII Chart	0x06	0x24	0x40	0x3E
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT ACK CHARACTER SETTING				
5	Scan Two Characters from Appendix D, Keypad	'0' and '6'	'2' and '4'	'4' and '0'	'3' AND 'E'
6	Scan ENTER/EXIT PROGRAMMING MODE				

NAK Character

This setting specifies an ASCII character or hex value to be used as the NAK character. ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option Data Bits has been set as 7 Data Bits.

To set this feature:

1. Determine the desired character or value.
2. Use the [ASCII Chart](#) on the inside back cover of this manual to find the hex equivalent for the desired character/value.
3. Go to [page 28](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT NAK CHARACTER SETTING.
5. Scan the appropriate two alpha-numeric characters from the keypad in [Appendix D, Keypad](#), that represent the desired character/value in step 1 above. The second character will cause a two-beep indication.
6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 30](#) for some examples of how to set this feature.

Table 30. NAK Character Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Character/Value	NAK	\$	@	>
2	Hex equivalent from ASCII Chart	0x15	0x24	0x40	0x3E
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT ACK CHARACTER SETTING				
5	Scan Two Characters From Appendix D, Keypad	'1' and '5'	'2' and '4'	'4' and '0'	'3' AND 'E'
6	Scan ENTER/EXIT PROGRAMMING MODE				

ACK NAK Timeout Value

This option specifies the amount of time the reader waits for an ACK character from the host following label transmission. The selectable timeout range is 200 milliseconds to 15,000ms (15 seconds) in 200ms increments. A selection of 0 disables the timeout.

To set this value:

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 200 (setting is in 200ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Go to [page 29](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT ACK NAK TIMEOUT VALUE SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 31](#) for some examples of how to set this feature.

Table 31. ACK NAK Timeout Value Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	200ms	1,000ms (1 sec.)	5200ms (5.2 sec.)	15,000ms (15 sec.)
2	Divide by 200	01	05	26	75
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT ACK NAK TIMEOUT VALUE SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'0' and '5'	'2' and '6'	'7' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

ACK NAK Retry Count

This feature specifies the number of times the reader retries a label transmission due to a retry condition. The selectable range is from 1 to 254 retries. A selection of 0 disables the count, and a selection of 255 specifies unlimited retries.

To set this feature:

1. Determine the desired setting.
2. Pad the number with leading zeroes to yield three digits. For example: 0 = 000, 5 = 005, 20 = 020, etc.
3. Go to [page 29](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT ACK NAK RETRY COUNT SETTING.
5. Scan the appropriate three digits from the keypad in [Appendix D, Keypad](#), that represent the number which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 32](#) for some examples of how to set this feature.

Table 32. ACK NAK Retry Count Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	Disable Retry Count	3 Retries	54 Retries	Unlimited Retries
2	Pad with leading zero(es)	000	003	054	255
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT ACK NAK RETRY COUNT SETTING				
5	Scan Three Characters From Appendix D, Keypad	'0', '0' and '0'	'0', '0' and '3'	'0', '5' and '4'	'2', '5' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Disable Character

Specifies the value of the RS-232 host command used to disable the reader.

ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option [Data Bits](#) has been set as 7 Data Bits.

To set the value:

1. Determine the desired character or value. A setting of 0xFF indicates the Disable Character is not used (not available).
2. Use the [ASCII Chart](#) on the inside back cover of this manual to find the hex equivalent for the desired character/value.
3. Go to [page 31](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT DISABLE CHARACTER SETTING.
5. Scan the appropriate two alpha-numeric characters from the keypad in [Appendix D, Keypad](#), that represent the desired character/value in step 1 above. The second character will cause a two-beep indication.
6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 33](#) for some examples of how to set this feature.

Table 33. Disable Character Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired character/value	'd'	'j'	'D'	Disable Command Not Used
2	Hex equivalent from ASCII Chart	0x64	0x7D	0x44	0xFF
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT DISABLE CHARACTER VALUE SETTING				
5	Scan Two Characters From Appendix D, Keypad	'6' and '4'	'7' and 'D'	'4' and '4'	'F' AND 'F'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Enable Character

Specifies the value of the RS-232 host command used to enable the reader.

ASCII characters or any hex value from 0 to 0xFF can be selected.

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters. 8-bit data is not recognized when the option Data Bits has been set as 7 Data Bits.

To set this feature:

Determine the desired character or value. A setting of 0xFF indicates the Enable Character is not used (not available).

1. Determine the desired character or value.
2. Use the [ASCII Chart](#) on the inside back cover of this manual to find the hex equivalent for the desired character/value.
3. Go to [page 31](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT ENABLE CHARACTER SETTING.
5. Scan the appropriate two alpha-numeric characters from the keypad in [Appendix D, Keypad](#), that represent the desired character/value in step 2 above. The second character will cause a two-beep indication.
6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 34](#) for some examples of how to set this feature.

Table 34. Enable Character Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired character/value	'e'	'}'	'E'	Enable Command Not Used
2	Hex equivalent from ASCII Chart	0x65	0x7D	0x45	0xFF
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT DISABLE CHARACTER VALUE SETTING				
5	Scan Two Characters From Appendix D, Keypad	'6' and '5'	'7' and 'D'	'4' and '5'	'F' AND 'F'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Keyboard Interface

Wedge Quiet Interval

Specifies the amount of time the reader looks for keyboard activity before it breaks the keyboard connection in order to transmit data to host. The range is from 0 to 990ms in 10ms increments.

This feature applies ONLY to the Keyboard Wedge interface.

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 10 (setting is in 10ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Go to [page 40](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Prog. Mode.
4. Scan the barcode: SELECT WEDGE QUIET INTERVAL SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit.

This completes the procedure to set the Wedge Quiet Interval. See [Table 35](#) for some examples of how to set this feature.

Table 35. Wedge Quiet Interval Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	10ms	150ms	600ms	850ms
2	Divide by 10 (and pad with leading zeroes)	01	15	60	85
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT WEDGE QUIET INTERVAL SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '1'	'1' and '5'	'6' and '0'	'8' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Intercharacter Delay

This parameter specifies the intercharacter delay between the end of one character and the beginning of the next. The delay can be set within a range of zero (0) to 990 milliseconds in 10ms increments. A setting of zero specifies no delay.

This feature applies ONLY to the Keyboard Wedge interface.

To set the delay:

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 10 (setting is in 10ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Go to [page 41](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT INTERCHARACTER DELAY SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 36](#) for some examples of how to set this feature.

Table 36. Intercharacter Delay Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	50ms	150ms	600ms	850ms
2	Divide by 10 (and pad with leading zeroes to yield two-digits)	05	15	60	85
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT INTERCHARACTER DELAY SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '5'	'1' and '5'	'6' and '0'	'8' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Intercode Delay

Specifies the delay between labels transmitted to the host for this interface. The selectable range for this feature is from 0 to 99 seconds.

Follow these instructions to set this feature:

1. Determine the desired setting.
2. Pad the number with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc
3. Go to [page 42](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT INTERCODE DELAY SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 37](#) for some examples of how to set this feature.

Table 37. Wedge Intercode Delay Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	No Delay	5 Seconds	60 Seconds	99 Seconds
2	Pad with leading zero(es)	00	05	60	99
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT INTERCODE DELAY SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '0'	'0' and '5'	'6' and '0'	'9' AND '9'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Symbologies

Decoding Level

Decoding Levels are used to configure a barcode symbology decoder to be very aggressive to very conservative depending on a particular customer's needs.

- Level 1 results in a very conservative decoder at the expense of not being able to read poorly printed or damaged labels.
- Level 5 results in a very aggressive decoder. This aggressive behavior allows decoding of poorly printed and damaged labels at the expense of increasing the likelihood of decoding errors.
- Level 3, which is the default setting, allows the majority of product labels to be decoded.

There are many factors that determine when to change the decoding level for a particular symbology. These factors include spots, voids, non-uniform bar/space widths, damaged labels, etc. that may be experienced in some barcode labels. If there are many hard to read or damaged labels that cannot be decoded using a conservative setting, increase the decoding level to be more aggressive. If the majority of labels are very good quality labels, or there is a need to decrease the possibility of a decoder error, lower the decoding level to a more conservative level.

Set Length

Length Control allows you to select either variable length decoding or fixed length decoding for the specified symbology.

Variable Length. For variable length decoding, a minimum and maximum length may be set.

Fixed Length. For fixed length decoding, two different lengths may be set.

Set Length 1

This feature specifies one of the barcode lengths for Length Control. Length 1 is the minimum label length if in Variable Length Mode, or the first fixed length if in Fixed Length Mode. Length includes the barcode's data characters only.

The number of characters that can be set varies, depending on the symbology. Reference the page for your selected symbology to see specific variables.

1. Determine the desired character length (varies depending on symbology). Pad the number with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
2. Go to the Set Length page for your selected symbology and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
3. Scan the barcode to SELECT LENGTH 1 SETTING for your selected symbology.
4. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the length setting which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

5. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Prog Mode.

Set Length 2

This feature allows you to set one of the barcode lengths for the specified symbology. Length 2 is the maximum label length if in [Variable Length](#) Mode, or the second fixed length if in [Fixed Length](#) Mode. See the page for the specific symbology for parameters.

The length that can be set varies depending on the symbology. A setting of 0 specifies to ignore this length (only one fixed length).

Follow these instructions to set this feature:

1. Determine the desired character length (from 1 to 50 — or 0 to ignore this length). Pad the number with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
2. Go to the Set Length page for your selected symbology and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
3. Scan the barcode to SELECT LENGTH 2 SETTING for your selected symbology.
4. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#) that represent the length setting which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake, before the last character scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

5. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

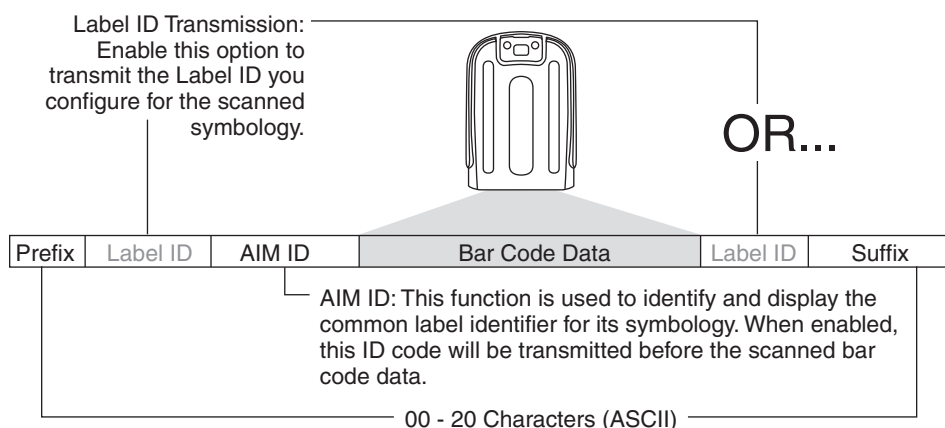

This completes the procedure.

Data Editing

When a barcode is scanned, additional information can be sent to the host computer along with the barcode data. This combination of barcode data and supplementary user-defined data is called a “message string.” The Data Editing features can be used to build specific user-defined data into a message string.

There are several types of selectable data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. Figure 6 shows the available elements you can add to a message string:

Figure 6. Breakdown of a Message String

Please Keep In Mind...

- Modifying a message string is not a mandatory requirement. Data editing is a sophisticated feature allowing highly customizable output for advanced users. Factory default settings for data editing is typically set to NONE.
- A prefix or suffix may be applied only to a specified symbology (reference [Code Selection, starting on page 77](#)) or across all symbologies (set via the Global features in this chapter).
- You can add any character from the [ASCII Chart](#) (from 00-FF) on the inside back cover of this manual as a prefix, suffix or Label ID.
- Enter prefixes and suffixes in the order in which you want them to appear on the output.

Global Prefix/Suffix

Up to 20 ASCII characters may be added as a prefix (in a position before the barcode data) and/or as a suffix (in a position following the barcode data) as indicated in Figure 7.

Figure 7. Prefix and Suffix Positions

Example: Setting a Prefix

In this example, we'll set a prefix for all symbologies.

1. Determine which ASCII character(s) are to be added to scanned barcode data. In this example, we'll add a dollar sign ('\$') as a prefix.
2. Go to [page 52](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode.
3. Scan the SET GLOBAL PREFIX barcode.
4. Reference the [ASCII Chart](#) on the inside back cover of this manual to find the hex value assigned to the desired character. The corresponding hex number for the '\$' character is 24. To enter this selection code, scan the '2' and '4' barcodes from [Appendix D, Keypad](#).

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

5. If less than the expected string of 20 characters are selected, scan the ENTER/EXIT barcode to terminate the string.
6. Scan the ENTER/EXIT barcode once again to exit Programming Mode.
7. The resulting message string would appear as follows:

Scanned barcode data: **12345**

Resulting message string output: **\$12345**

Global AIM ID

This feature enables/disables addition of AIM IDs for all symbology types.

AIM label identifiers (as opposed to custom characters you select yourself as with label identifiers) can be included with scanned barcode data. AIM label identifiers consist of three characters as follows:

- A close brace character (ASCII '['), followed by...
- A code character (see the table below), followed by...
- A modifier character (the modifier character is symbol dependent).

SYMBOLGY	CHAR	SYMBOLGY	CHAR
UPC/EAN	E ^a	Code 128/GS1-128	C
Code 39 and Code 32	A	DataBar Omnidirectional, DataBar Expanded	e
Codabar	F	Standard 2 of 5	S
Interleaved 2 of 5	I	ISBN	X ^b
Code 93	G	Code 11	H

- a. UPC-A and UPC-E labels are converted to EAN 13 when adding AIM IDs.
 b. ISBN (X with a 0 modifier character)

Figure 8. AIM ID

Label ID

A Label ID is a customizable code of up to three ASCII characters (each can be one of hex 0x01-0xFF), used to identify a barcode (symbology) type. It can be appended previous to or following the transmitted barcode data depending upon how this option is enabled. This feature provides options for configuring custom Label IDs as a pre-loaded set (see "Label ID: Pre-loaded Sets" below) or individually per symbology (see "Label ID: Set Individually Per Symbology" on page 249). If you wish to program the reader to always include an industry standard label identifier for ALL symbology types, see "Global AIM ID" on page 53.

Label ID: Pre-loaded Sets

The reader supports two pre-loaded sets of Label IDs. Table 38 shows the USA and the EU sets.

CAUTION

When changing from one Label ID set to another, all other reader configuration settings, including the host interface type, will be erased and set to the standard factory defaults. Any custom configuration or custom defaults will be lost.

Table 38. Label ID Pre-loaded Sets

Symbology	USA Label ID set		EU Label ID set	
	ASCII character	Hexidecimal value	ASCII character	Hexidecimal value

Label ID: Set Individually Per Symbology

To configure a Label ID individually for a single symbology:

1. Go to [page 55](#) and scan the ENTER/EXIT barcode.
2. Select Label ID position as either BEFORE (Enable as Prefix) or AFTER (Enable as suffix) by scanning the appropriate barcode in the section "[Label ID Control](#)" on [page 56](#). Reference Figure 9 for Label ID positioning options if multiple identification features are enabled.
3. Scan a barcode to select the symbology for which you wish to configure a custom Label ID from the section "[Label ID Symbology Selection](#)" on [page 57](#).
4. Determine the desired character(s) (you may choose up to three) which will represent the Label ID for the selected symbology.
5. Turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits associated with your choice of Label ID. For example, if you wish to select an equal sign (=) as a Label ID, the chart indicates its associated hex characters as 3D. Turn to [Keypad, starting on page 279](#) and scan the barcodes representing the hex characters determined. For the example given, the characters '3' and 'D' would be scanned. More examples of Label ID settings are provided in [Table 39](#).

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT barcode to exit Label ID entry.
7. Scan the ENTER/EXIT barcode once again to exit Programming Mode.

This completes the steps to configure a Label ID for a given symbology.

Figure 9. Label ID Position Options

Table 39. Label ID Examples

STEP	ACTION	EXAMPLES			
1.	Scan the ENTER/EXIT barcode	(Scanner enters Programming Mode)			
2.	Determine placement of the Label ID characters BEFORE or AFTER with regard to scanned data using Label ID Control, starting on page 56	Enable as Prefix	Enable as Suffix	Enable as Prefix	Enable as Suffix
3.	Scan the barcode selecting the symbology type you wish to designate label ID characters for using Label ID Symbology Selection, starting on page 57.	DataBar Omnidirectional	Code 39	Interleaved 2 of 5	Code 32
4.	Custom Label ID example (desired characters):	D B *	= C 3	+	P H
5.	Find hex equivalents from the ASCII Chart(inside back cover), then scan in these digits/characters using the barcodes in the section: Keypad, starting on page 279. If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.	44 42 2A	3D 43 33	2B	50 48
6.	Scan the ENTER/EXIT barcode	(Scanner exits Label ID entry)			
7.	Scan the ENTER/EXIT barcode once again	(Scanner exits Programming Mode)			
Result:		DB*[barcode data]	[barcode data]=C3	+ [barcode data]	[barcode data]PH

Character Conversion

Character conversion is an eight byte configuration item. The eight bytes are 4 character pairs represented in hexadecimal ASCII values. The first character in the pair is the character that will be converted. The second character in the pair is the character to convert to. If the character to convert in a pair is FF, then no conversion is done.

For example, if you have the character conversion configuration item set to the following:
41423132FFFFFFFF

The first pair is 4142 or AB (41 hex is an ASCII capital A, 42 hex is an ASCII capital B) and the second pair is 3132 or 12 (31 hex is an ASCII 1, 32 is an ASCII 2). The other two pairs are FFFF and FFFF.

With the label, AB12BA21, it would look as follows after the character conversion: BB22BB22.

The A characters were converted to B characters and the 1 characters were converted to 2 characters. Nothing is done with the last two character pairs, since they are all FF.

To set Character Conversion:

1. Go to [page 64](#) and scan the ENTER/EXIT barcode.
2. Scan the “Configure Character Conversion” barcode.
3. Determine the desired string. Sixteen positions must be determined as in the above example. Next, turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits needed to fulfill the string.
4. Turn to [Appendix D, Keypad](#) and scan the barcodes representing the hex characters determined in the previous step.
5. Scan the ENTER/EXIT barcode to exit Programming Mode.

If less than the expected string of 16 characters are selected, scan the ENTER/EXIT barcode twice to accept the selections and exit Programming Mode.

Reading Parameters

Label Gone Timeout

This feature sets the time after the last label segment is seen before the reader prepares for a new label. The timeout can be set within a range of 10 milliseconds to 2,550 milliseconds (2.55 seconds) in 10ms increments. Label Gone Timeout does not apply to scan modes that require a trigger pull for each label that is read

Follow these instructions to set this feature:

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 10 (setting is in 10ms increments). Pad the result with leading zeroes to yield three digits. For example: 0 = 000, 5 = 005, 20 = 020, etc.
3. Go to [page 67](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT LABEL GONE TIMEOUT SETTING.
5. Scan the appropriate three alpha-numeric characters from the keypad in [Appendix D, Keypad](#) representing the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 40](#) for some examples of how to set this feature.

Table 40. Timeout Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	50ms	150ms	1800ms (1.8 sec.)	2550ms (2.55 sec.)
2	Divide by 10 (and pad with leading zeroes)	005	015	180	255
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT LABEL GONE TIMEOUT SETTING				
5	Scan Three Characters From Appendix D, Keypad	'0', '0' and '5'	'0', '1' and '5'	'1', '8' and '0'	"2", '5' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Good Read LED Duration

This feature specifies the amount of time that the Good Read LED remains on following a good read. The good read LED on time can be set within a range of 10 milliseconds to 2,550 milliseconds (0.001 to 2.55 seconds) in 100ms increments.

Follow these instructions to set this feature:

1. Determine the desired setting in milliseconds. A setting of 0 means that the good read LED stays on until the next time the trigger is pulled.
2. Divide the desired setting by 10 (setting is in 100ms increments). Pad the result with leading zeroes to yield three digits. For example: 0 = 000, 5 = 000, 20 = 020, etc.
3. Go to [page 72](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT GOOD READ LED DURATION SETTING.
5. Scan the appropriate three digits from the keypad in [Appendix D, Keypad](#) representing the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 41](#) for some examples of how to set this feature.

Table 41. Good Read LED Duration Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	Good Read LED stays on until next trigger pull (00)	20ms	150ms	2550ms (2.55 sec.)
2	Divide by 10 (and pad with leading zeroes)	000	002	015	255
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT LABEL GONE TIMEOUT SETTING				
5	Scan Three Characters From Appendix D, Keypad	'0', '0' and '0'	'0', '0' and '2'	'0', '1' and '5'	'2', '5' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Scanning Features

Scan Mode

This mode is associated with typical handheld reader operation. Selects the scan operating mode for the reader. The following selections are valid for all models:

Trigger Single. When the trigger is pulled, scanning is activated until one of the following occurs:

- [Scanning Active Time](#) has elapsed
- a label has been read
- the trigger is released

Trigger Hold Multiple. When the trigger is pulled, scanning starts and the product scans until the trigger is released or [Scanning Active Time](#) has elapsed. Reading a label does not disable scanning. [Double Read Timeout](#) prevents undesired multiple reads of the same label while in this mode.

Trigger Pulse Multiple. When the trigger is pulled, continuous scanning is activated until [Scanning Active Time](#) has elapsed or the trigger has been released and pulled again. [Double Read Timeout](#) prevents undesired multiple reads of the same label while in this mode.

Flashing. The reader flashes¹ on and off regardless of the trigger status. Flash rate is controlled by [Flash On Time](#) and [Flash Off Time](#). When Flash is ON the imager reads continuously; when Flash is OFF scanning is deactivated.

Flashing is the recommended scan mode for WLS9600 hands-free (stand mode) of operation

Always On. No trigger pull is required to read a barcode. Scanning is continually on. If the trigger is pulled, the reader acts as if it is in Trigger Single Mode. [Double Read Timeout](#) prevents undesired multiple reads of the same label while in this mode.

1. Controlled by [Flash On Time](#).

Scanning Active Time

This setting specifies the amount of time that the reader stays in scan ON state once the state is entered. The range for this setting is from 1 to 255 seconds in 1-second increments.

Follow these instructions to set this feature:

1. Determine the desired setting.
2. Pad the result with leading zeroes to yield three digits. For example: 0 = 000, 5 = 005, 20 = 020, etc.
3. Go to [page 74](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT SCANNING ACTIVE TIME SETTING.
5. Scan the appropriate three digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 42](#) for some examples of how to set this feature.

Table 42. Scanning Active Time Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	1 Second	90 Sec. (1.5 min.)	180 Sec. (3 min.)	255 Seconds (4.25 min.)
2	Pad leading zero(es)	001	090	180	255
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT SCANNING ACTIVE TIME SETTING				
5	Scan Three Characters From Appendix D, Keypad	'0', '0' and '1'	'0', '9' and '0'	'1', '8' and '0'	'2', '5' and '5'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Flash On Time

This feature specifies the ON time for the indicator LED while in Flash Mode. The selectable range is 100 to 9,900 milliseconds (0.1 to 9.9 seconds), in 100 millisecond increments.

Follow these instructions to set this feature.

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 100 (setting is in 100ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Go to [page 74](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT FLASH ON TIME SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#) representing the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 43](#) for some examples of how to set this feature.

Table 43. Flash On Time Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	500ms	1,000ms (1 sec.)	5200ms (5.2 sec.)	9,900ms (9.9 sec.)
2	Divide by 100 (and pad with leading zeroes to yield two digits)	05	10	52	99
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT FLASH OFF TIME SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '5'	'1' and '0'	'5' and '2'	'9' and '9'
6	Scan ENTER/EXIT PROGRAMMING MODE				

Flash Off Time

This feature specifies the OFF time for the indicator LED while in Flash Mode. The selectable range is 100 to 9,900 milliseconds (0.1 to 9.9 seconds), in 100 millisecond increments.

Follow these instructions to set this feature.

1. Determine the desired setting in milliseconds.
2. Divide the desired setting by 100 (setting is in 100ms increments). Pad the result with leading zeroes to yield two digits. For example: 0 = 00, 5 = 05, 20 = 20, etc.
3. Go to [page 75](#) and scan the ENTER/EXIT PROGRAMMING MODE barcode to enter Programming Mode.
4. Scan the barcode: SELECT FLASH OFF TIME SETTING.
5. Scan the appropriate two digits from the keypad in [Appendix D, Keypad](#), that represent the duration which was determined in the steps above. You will hear a two-beep indication after the last character.

If you make a mistake before the last character, scan the CANCEL barcode to abort and not save the entry string. You can then start again at the beginning.

6. Scan the ENTER/EXIT PROGRAMMING MODE barcode to exit Programming Mode.

This completes the procedure. See [Table 44](#) for some examples of how to set this feature.

Table 44. Flash Off Time Setting Examples

STEP	ACTION	EXAMPLES			
1	Desired Setting	500ms	1,000ms (1 sec.)	5200ms (5.2 sec.)	9,900ms (9.9 sec.)
2	Divide by 100 (and pad with leading zeroes to yield two digits)	05	10	52	99
3	Scan ENTER/EXIT PROGRAMMING MODE				
4	Scan SELECT FLASH OFF TIME SETTING				
5	Scan Two Characters From Appendix D, Keypad	'0' and '5'	'1' and '0'	'5' and '2'	'9' and '9'
6	Scan ENTER/EXIT PROGRAMMING MODE

10	CTS (in)			

LED and Beeper Indications

The reader's beeper sounds and its LED illuminates to indicate various functions or errors on the reader. An optional "Green Spot" also performs useful functions. The tables below list these indications. One exception to the behaviors listed in the tables is that the reader's functions are programmable, and may or may not be turned on. For example, certain indications such as the power-up beep can be disabled using programming barcode labels.

Table 47. LED and Beeper Indications

INDICATION	DESCRIPTION	LED	BEEPER
Power-up Beep	The reader is in the process of powering-up.		Reader beeps four times at highest frequency and volume upon power-up.
Good Read Beep	A label has been successfully scanned by the reader.	LED behavior for this indication is configurable via the feature " Good Read: When to Indicate "	The reader will beep once at current frequency, volume, mono/bi-tonal setting and duration upon a successful label scan.
ROM Failure	There is an error in the reader's software/programming	Flashes	Reader sounds one error beep at highest volume.
Limited Scanning Label Read	Indicates that a host connection is not established when the IBM or USB interface is enabled.	N/A	Reader 'chirps' six times at the highest frequency and current volume.
Reader Active Mode	The reader is active and ready to scan.	The LED is lit steadily ^a	N/A
Reader Disabled	The reader has been disabled by the host.	The LED blinks continuously	N/A
Green Spot is on continuously	While in Stand Mode or Trigger Stand Mode the green spot shall be on while in stand watch state.	N/A	N/A
Green Spot ^a flashes momentarily	Upon successful read of a label, the software shall turn the green spot on for the time specified by the configured value.	N/A	N/A

a. Except when in sleep mode or when a [Good Read LED Duration](#) other than 00 is selected

Table 48. Programming Mode Indications

Programming Mode - The following indications ONLY occur when the reader is in Programming Mode.			
Label Programming Mode Entry	A valid programming label has been scanned.	LED blinks continuously	Reader sounds four low frequency beeps.
Label Programming Mode Rejection of Label	A label has been rejected.	N/A	Reader sounds three times at lowest frequency & current volume.
Label Programming Mode Acceptance of Partial Label	In cases where multiple labels must be scanned to program one feature, this indication acknowledges each portion as it is successfully scanned.	N/A	Reader sounds one short beep at highest frequency & current volume.
Label Programming Mode Acceptance of Programming	Configuration option(s) have been successfully programmed via labels and the reader has exited Programming Mode.	N/A	Reader sounds one high frequency beep and 4 low frequency beeps followed by reset beeps.
Label Programming Mode Cancel Item Entry	Cancel label has been scanned.	N/A	Reader sounds two times at low frequency and current volume.

Error Codes

Upon startup, if the reader sounds a long tone, this means the reader has not passed its automatic Selftest and has entered FRU (Field Replaceable Unit) isolation mode. If the reader is reset, the sequence will be repeated. The following table describes the LED flashes/beep codes associated with an error found.

NUMBER OF LED FLASHES/BEEPS	ERROR	CORRECTIVE ACTION
1	Configuration	Contact Helpdesk for assistance
2	Interface PCB	
4	Reader Module	
5	Laser Pointer (if so equipped)	
6	Digital PCB	
14	CPLD/Code Mismatch	

NOTES

Appendix B

Standard Defaults

The most common configuration settings are listed in the “Default” column of the table below. Page references are also provided for feature descriptions and programming barcodes for each parameter. A column has also been provided for recording of your preferred default settings for these same configurable features.

Table 49. Standard Defaults

Parameter	Default	Your Setting	Page Number
GLOBAL INTERFACE FEATURES			
Host Commands — Obey/Ignore	Obey		17
USB Suspend Mode	Disable		17
RS-232 ONLY

Scancode Tables

Control Character Emulation

Control character emulation selects from different scancode tables as listed in this appendix. Each of the control character sets below are detailed by interface type in the tables. These apply to Wedge and USB Keyboard platforms.

Control Character 00 . Characters from 00 to 0x1F are sent as control character Ctrl+Keys, special keys are located from 0x80 to 0xA1.

Control Character 01 . Characters from 00 to 0x1F are sent as control character Ctrl+Capital Key, special keys are located from 0x80 to 0xA1.

Control Character 02 . Special keys are located from 00 to 0x1F and characters from 0x80 to 0xFE are intended as an extended ASCII table (Microsoft Windows Codepage 1252 — See page 290.)

Single Press and Release Keys

In the following tables, Ar↓ means Alt right pressed and Ar↑ means Alt right released and so on. Definitions for other keys are Al (Alt left), Cr (Control Right) Cl (Control Left) Sh (shift). This method can be used for combining Alt, Control or Shift with other keys.

Example: Consider a Control character set to 00. If AltRight+A is required before sending a label to the host, it could be done by setting three Prefix keys in this way: 0x99 0x41 0x9A.

Interface Type PC AT PS/2, USB-Keybord or USB-Keybord for APPLE
